The four Lifepower4 work perfectly with the other batteries and communicate with my inverter. Took a couple three days to balance out but that's the way it is. My rack and batteries arrived in perfect condition and the one question I had was answered quickly. Great equipment and company.

Here's how you can do that: Let's say you have 1000 Ah tubular batteries that run on a 12V DC current. To get the Wh, you simply multiply the Ah by voltage and you get 12,000 Wh capacity. This is a 12 kWh capacity. If you have let's say 10 kWh lithium battery, you can now compare these two battery capacities apple-to-apple. Hope this makes ...

Hi Eugene. Alright, the power output of 48V lithium battery will most certainly be higher than 12V deep cycle AGM batteries, so no worries there. Let's check the total capacities: - Old setup with deep cycle AGM batteries: $16 \times 12V \times 250Ah = 48,000Wh$ or 48 kWh. - New setup with lithium batteries: $5 \times 4.8 \text{ kW} = 24 \text{ kWh}$.

A kilo-watt hour is a measure of 1,000 watts during one hour. The abbreviation for kilo-watt hour is kWh. So 1,000 watts during one hour is 1 kWh. The power company measures energy in kWh in order to calculate your monthly bill.
