Connecting a solar panel to a battery and inverter Step 1: Connect the battery to charge controller. In the first step, you will wire the battery to a charge controller. It is essential to wire this component before you wire the solar panels. If you wire the solar panels to your charge controller first, the fuse of the charge controller might blow.

In this example, based on my lowest expected temperature of -10°F (-23°C), my correction factor is 1.2. 2. Multiply solar panel Voc by your correction factor. 3. Multiply the max solar panel Voc by the number of panels wired in series. In this example, the max open circuit voltage of your solar array is 47.6V.
