So why would one attempt to rebuild the power steering pump? Well, the primary (and really, only) reason is

2000 toyota solara power steering pump replacement

leakage. The seals go after so many thousands of miles, and the pump starts leaking, making an oily mess of everything.

The power steering pump is a critical component of the hydraulic system. The pump circulates and pressurizes power steering fluid. When the pressurized fluid is transferred through a hose to the steering pump, it is used to help turn the wheel. As the wheel turns, another hose returns the fluid back through the pump, where it is pressurized again.

The P/S pump has two lines going to it: the suction hose, and the pressure line. Stick a drain pan underneath the car to catch all the nasty old P/S fluid that'll gush: Let it drip out; this will empty the reservoir as well. Next, unbolt the banjo bolt fitting that holds the pressure line to the pump.

Something interesting is that there is still a different kit supplied for locally-produced 5S of that year: 04446-06030 - your favorite compatible power steering fluid. All Toyotas of this era use ATF as the power steering fluid; Dexron III will have been originally specified, but you can use a wide range of ATFs.
