

One of the concerns from owners of Corvettes with this suspension system is that the ride is potentially still too "firm" in certain situations. Also, for those who carve corners, there have been changes to certain settings that enable the cars to navigate quicker during track duty.

The day after, the car wouldn't start because steering column lock. The dealer said wait 15 min then try again. It did start at that time. Then the following week it did the same thing, and started after 15 min. I was sitting in the car reading the manual while it was running and it then said reduced engine power then shut off.

Last night for the first time ever it came on about 10 to 15 seconds after I hit a big pot hole. I noticed the windows were fogging up, tried rolling the window down, no power, immediately pulled over and as I did, the check engine light came on along with the warnings. I let it sit for a bit (10 mins) and started it up and everything was fine.
