The Enphase M215-IG Microinverter (M215-60-2LL-S22-IG) with integrated ground delivers increased energy harvest and reduces design and installation complexity with its all-AC approach. With the advanced M215, the DC circuit is isolated and insulated from ground, so no Ground Electrode Conductor (GEC) is required for the microinverter.

input voltage range of the Enphase Microinverter. WARNING: The maximum open circuit voltage of the PV module must not exceed the specified maximum input DC voltage of the Enphase Microinverter. WARNING: The M215 has field-adjustable voltage and frequency trip points that may need to be set, depending upon local requirements.

I have used M215's since 2014 timeframe; the early rev's needed to be grounded with AWG-6 copper wire and the later rev's had integrated grounding and did not need to be grounded. The spec sheet for M215 is venerable and the solar panel wattages were listed as 190-270+ Watts, but I have used 290-Watt panels with them and they work superbly.

of 1.2 times the AC power output rating of the inverter. Many system designers use a multiplier of 1.25 or 1.3. For an M250 Microinverter, this would suggest a module power rating of 228W to 300W (STC) or ... The Enphase M215 and M250 Microinverters work ONLY with 60-cell modules. ... I have 85 M215 and M250 micros, and am going to be upgrading 40 of them to completely new panel-micro pairs. You may have to consider upgrading your solar panels, too. The IQ8 low-end may be a 320-Watt micro, so the panels you currently have paired with your M215's will not produce enough DC power to be matched to the new IQ8's.

<p>This year I had my first IQ7 replacement micro-inverter installed. It replaced an 8-year-old M215-60-2LL-S22-NA unit. It seems that the replacement IQ7's are specifically designated for M215 replacement as they are labelled something like "m215-IQ7".</p><p></p><p>After replacing the unit, we found that it appeared that another inverter went down the next day. ...
