In this article, we'll look at five distinct environmental benefits of replacing fossil fuels with solar energy.

Hence, we can conclude that fossil fuels are not as viable as solar energy. Sunlight can be accessed at any point of the day as long as the sun exists. Unlike fossil fuels, it will not disappear for millions of years.

However, the bitter fact and main issue is the lion's share of Australia's energy needs are still met by fossil fuels even when the world grapples with serious climate issues. From generating electricity with coal to increasingly using natural gas for cooking and heating, the daily use of fossil fuels is skyrocketing.

Improved public health. The air and water pollution emitted by coal and natural gas plants is linked with breathing problems, neurological damage, heart attacks, cancer, premature death, and a host of other serious problems.
