Hellion Power Systems is a turbocharger specialist with one goal - produce and develop the finest bolt-on turbo kits in the industry and back that with outstanding customer service. Since 2004, the company's core business has been building record setting turbo systems and keeping customers at the forefront of turbocharging technology.

A single turbocharger is the most common type of turbo system. A single turbo setup provides adequate power for most applications with compact engines, including inline four and inline 6-cylinder engines. For V6 or V8 engines, twin turbochargers are often the way to go. This turbo setup is preferred as each bank gets its own turbocharger.
