Accucold"s PF1Kit is a power-out alarm designed to audibly warn users in the event of a power failure.

Alarm system lost power

Simply plug your own electrical device into the PF1 receptacle, and plug the grounded three-wire 15 amp PF1 cord into your wall outlet. If your unit loses power, the battery-powered alarm will sound at an 80 dB noise level for up to 90 minutes.

The message has the instruction to hold down the volume button for 2 secs. to re-enable the audio system due to a power loss. While this message occurs any time power is lost, there's a bug in the system and it occurs randomly even when there is no power loss. The message also has a caveat that says if it happens frequently see your dealer.

Some alarm systems are hardwired. That means they are directly connected to the electricity in your home through an outlet or a wire in the wall. If the power is disconnected or your power recently went out, your alarm system may beep to let you know. To check if the power is connected to your alarm system, try these 3 things:

Explain the situation, and then verify your ID. They will take it from there, and you won't have to worry about resetting the system yourself. In most of the newer alarm systems, you can get the beeping to stop by simply disarming the alarm system.
