

Second, artificial intelligence has an asymmetric effect on renewable energy development, and their nexus is closer in countries with lower levels of renewable energy development. Third, artificial intelligence works on renewable energy development through technology effect and innovation effect.

Received: 11 April 2022 Accepted: 13 April 2022 IET Renewable Power Generation DOI: 10.1049/rpg2.12479 GUEST EDITORIAL Applications of artificial intelligence in renewable energy systems
1 INTRODUCTION Owing to the strong uncertainty and fluctuation of renewable energy generations, renewable energy systems are becoming more sophisticated.

The way we produce, distribute, and use clean energy is being revolutionized by artificial intelligence (AI), which is having a significant impact on the management and optimization of renewable energy systems. Artificial intelligence (AI) tools, such predictive analytics and machine learning algorithms, are crucial for tackling the problems that come with renewable energy, ...

Mukhdeep Singh Manshahia, Ph.D., is an Assistant Professor at Punjabi University Patiala, Punjab, India. He obtained his Ph.D. in 2016 from Punjabi University Patiala. He works in Sustainable Computing, Artificial Intelligence, Wireless Sensor Networks, the Internet of Things (IoT), Nature Inspired Computing, Energy Harvesting, and Renewable Energy Systems.

Abstract The use of artificial intelligence (AI) has gained tremendous popularity in recent years, and it has become ubiquitous for use in the energy sector. ... review focuses on studies that highlight the realm of AI to benefit the energy sector as a key enabler to the growth of renewable energy sources from wind, solar, geothermal, ocean as ...

There is a better, more forward-looking alternative already in existence: Artificial Intelligence (AI) that leverages decentralized renewable generation sources. Renewable energy increases complexity As we move toward an increasingly electric world, more energy will be produced by decentralized, renewable sources.

Similar studies with the application of artificial intelligence in energy systems with an emphasis on renewable energies such as the use of artificial intelligence for short and long-term predictions [16], comparison of supervised and unsupervised machine learning methods for solar power prediction [17], development of solar radiation ...

Artificial intelligence (AI) has enormous potential in improving the efficiency and reducing the cost of energy systems; however, it is unclear whether it can help accelerate the ...

National Renewable Energy Laboratory: Seong Lok Choi, Rishabh Jain, and Patrick Emami Pacific Northwest National Laboratory: Anurag Acharya, Anastasia Bernat, Sarthak Chaturvedi, Mahantesh Halappanavar, ...

Artificial Intelligence (AI) (14110), issued October 30, 2023. Priority use cases have been identified in four broad areas where AI

Renewable energy is a sustainable substitute to fossil fuels, which are depleting and attributing to global warming as well as greenhouse gas emissions. Renewable energy innovations including solar, wind, and geothermal have grown significantly and play a critical role in meeting energy demands recently. Consequently, Artificial Intelligence (AI) could further enhance the benefits ...

zero emissions by 2050, every sector of the energy economy needs to eliminate emissions completely. This, according to BNEF's net-zero scenario, would require investments in energy infrastructure to total between \$92 trillion and \$173 trillion between 2020 and 2050. The move towards greater proportions of renewable energy generation has two main

Jennifer L. Cohen and Homi Kharas, "Using big data and artificial intelligence to accelerate global development," (Washington, DC: Brookings Institution, November 2018), [https:// ...](https://...)

ARTIFICIAL INTELLIGENCE FOR RENEWABLE ENERGY AND CLIMATE CHANGE. Written and edited by a global team of experts in the field, this groundbreaking new volume presents the concepts and fundamentals of using artificial intelligence in renewable energy and climate change, while also covering the practical applications that can be utilized across multiple ...

ARTIFICIAL INTELLIGENCE FOR RENEWABLE ENERGY AND CLIMATE CHANGE Written and edited by a global team of experts in the field, this groundbreaking new volume presents the concepts and fundamentals of using artificial intelligence in renewable energy and climate change, while also covering the practical applications that can be utilized ...

The "14th Five-Year Renewable Energy Development Plan" issued by the National Energy Administration states that China will strive to increase the proportion of non-fossil energy in total energy consumption to 17.3 % in 2022 and increase the proportion of wind power and photovoltaic (PV) power generation in the total electricity consumption ...

The integration of artificial intelligence into renewable energetic systems would allow the rapid development of a knowledge-based economy suitable to the energy transition, while fully integrating the renewables into the global economy. This is how artificial intelligence has hand in by conceptualizing this transition and above all by saving time.

Furthermore, AI will support low-carbon energy systems with high integration of renewable energy and energy efficiency, which are all needed to address climate change 13,36,37. AI can also be used ...

Chen et al. [62] proposed an Artificial Intelligence-based Useful Evaluation Model (AIEM) to predict the

economic impacts of renewable energy and energy efficiency, and thus improve the utilization of renewable energy. Artificial intelligence is gradually becoming an important driving force for the transformation and development of the energy ...

This review specifically explored the applications of diverse artificial intelligence approaches over a wide range of sources of renewable energy innovations spanning solar ...

Artificial intelligence's role in wind energy has been assessed by Foley et al. ... Yücel M, Selba? R, Özkahraman M, Elmas Ç, Aliyeva A (2023) Real-time mask detection based on artificial intelligence using renewable energy system unmanned aerial vehicle. In: Smart applications with advanced machine learning and human-centred problem design ...

Building on the potential of renewable energy, Artificial Intelligence (AI) has gathered much interest in the energy community as it provides advanced data analysis and insight opportunities. Significant research efforts have been made with AI and power systems; however, limited research efforts have focused on AI's impact on microgrids in ...

Furthermore, AI will support low-carbon energy systems with high integration of renewable energy and energy efficiency, which are all needed to address climate change ...

The global transition to renewable energy will need artificial intelligence (AI) technology to manage decentralized grids. AI can balance electricity supply and demand ...

The use of artificial intelligence in the clean energy sector increases the availability and accessibility of clean energy, making it a more viable and cost-effective alternative to traditional energy sources. ... As of 2022, hydroelectric power is the most common source of renewable energy globally, with an installed capacity greater than ...

Artificial Intelligence utilizes the features of renewable energy in order to improve the systems economic functioning. This study shows a complete review as well as modern research findings in the fields of wind, solar, geothermal, bioenergy, ocean, ...

Renewable energy technologies such as Energy forecasting, energy efficiency, and energy accessibility are the key factors that incorporate Artificial intelligence. In this paper, the Artificial Intelligence-based useful evaluation model (AIEM) has been proposed for forecasting renewable energy and energy efficiency impact on the economy.

WASHINGTON, D.C. -- As part of President Biden's Investing in America agenda, the U.S. Department of Energy (DOE) today announced a series of actions delivering on key elements of the Executive Order on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence. As part of a broader suite of

announcements, DOE issued AI and Energy: ...

Artificial intelligence in sustainable energy industry: Status Quo, challenges and opportunities. Author links open overlay panel Tanveer Ahmad a b, ... The total share of renewable energy is currently growing from about a 1/4% to about 45% in 2040 (from which PV contributes 11%, up from the current 2%) (IEA, 2019a). Recent developments have ...

Artificial intelligence (AI) has had a significant impact on renewable energy systems [17], with data-driven techniques replacing conventional rule-based approaches to aid scientific discovery and decision-making processes in the sustainable energy industry [18]. Optimization is also a fundamental task within this regime.

In light of the coming energy crisis brought on by the rapid depletion of these resources and the enormous difficulties posed by environmental issues, wind power is swiftly overtaking fossil fuels as the world's primary source of energy [4]. Nevertheless, as wind energy expands, its numerous connections might quickly lead to a decline in frequency, grid voltage, ...
