

Understanding how people turn episodes in time into subjectively meaningful narratives can shed light on adaptive meaning-making processes. Bridging attachment theory and narrative meaning making may elucidate how individuals distinctively narrate highly stressful and traumatic memories and whether such expression matters for psychological health.

What's an Attachment Style. Based on the original researchers of attachment theory (Ainsworth, 1973; Bowlby, 1969), we define an attachment style: An attachment is a deep and enduring emotional bond that connects one person to another across time and space. Evolutionary theory may suggest that attachment styles likely evolved to ensure people stuck in relationships for ...

The purpose of this study is to determine the explanatory power of the anxious and avoidant dimensions of attachment to explain the interpersonal cognitive distortions. The research was

It is connected to situations where the interpersonal motivational system of competition for resources and forming social ranks (Liotti, 2001; Liotti and Monticelli, 2008) emerges: starting from a conflictual relationship, facilitated by a suffocating sensation of being controlled and a judgmental context, an asymmetric balance of power arises ...

This paper examines the current empirical accounting research paradigm. We ask: In general, do the estimated regressions support the promoted narratives? We focus on a regression model's main variable of interest and consider the extent to which it contributes to the explanation of the dependent variable. We replicate 10 recently published accounting studies, all of which ...

The attachment system actually operates as a goal-directed homeostatic system that allows the child to experience safety and quiescence when it detects danger or stress occurs. ... RS attachment style shows good explanatory power, with  $R^2$  values ranging between 0.24 (energy) and 0.38 (banking). Both general patterns and significance levels are ...

In section one, we present the standard attachment view of personality. In section two, we illustrate how, despite its explanatory power, this view faces three major problems concerning ...

The new Milwaukee Quik-Lok attachment system is a multi-head solution that includes a power head, string trimmer, edger, pole saw, and articulating hedge trimmer. Sticking with the M18 9.0 Ah High Demand battery pack as the primary power source, it's an all-in-one product to handle everything the mower can't.

Designed to meet the needs of landscape maintenance professionals, the M18 FUEL(TM) QUIK-LOK(TM) Attachment System is a versatile outdoor power equipment system featuring multiple attachments powered by a single M18 Fuel(TM) Power ...

## Attachment system explanatory power

Here, the use of structural equation modeling and person-centered analytic techniques - in addition to a focus on the mediating and moderating influences of family systems concepts - might yield a more comprehensive set of studies that would demonstrate the actual explanatory power of this theoretical framework.

Mikulincer and Shaver 11, 12 introduced a model specifying the activation and operation of the adult attachment system. When attachment figures are perceived as available and responsive, a sense of felt security is developed which encourages the formation of close bonds with others. ... potentially limiting the explanatory power of the ...

that positive explanatory style--characterized by internal, stable, and global explanations of favorable life events--is related to greater psychological well-being (Peterson and Seligman, 1984; Seligman, 1991). Attachment researchers have yet to examine the possible linkages between attachment style and explanatory style.

Under the first module, the attachment system is argued to be activated if individuals perceive a potential threat emanating from an attachment figure (i.e., one's leader), with recurrent perceptions of threat leading to chronic activation and amplification of the attachment system, as described in the second module of the model.

The Universal Attachment Capable System power head comes with either the string trimmer or edger which DeWalt will package either as a kit or as a bare tool. Kitted with a 9.0Ah FlexVolt battery and charger, either of these options will ...

Attachment theory, of course, is either confirmed or refuted on the basis of both its biological foundations and its integration within a natural sciences context (Bowlby, 1981; Citation Fonagy, 2001) Ilivianian interpersonal theory and its contemporary relationalist counterpart, however, are "more at home with postmodern deconstructive ideas" than they are with ...

The objective of this explanatory mixed-methods study is to compare Novaloc, a novel attachment system with such characteristics, to a traditional alternative for single implants in the mandible of edentate elderly patients. ... Based on a power of 90%, this trial requires at least 21 participants . An additional 20% will be added to the ...

Attachment theory provides a useful conceptual framework for understanding trauma and the treatment of children who have been abused. This article examines childhood trauma and attachment issues from the perspective of behavior analysis, and provides a theoretical basis for two alternative treatment models for previously abused children and their foster or adoptive ...

The attachment theorist Lichtenberg (1989) has proposed that human behaviour is driven by a set of five "motivational systems", "designed to promote the fulfilment and regulation of basic needs." Two of these systems, the attachment-affiliation system and the exploration-assertion system are of interest here.

# Attachment system explanatory power

The attachment system might be defined as the motivational system that focuses on monitoring and ensuring the proximity and availability of caregivers, especially during distressing or dangerous situations (Bowlby, 1969, Bowlby, 1973, Bowlby, 1980; Del Giudice, 2022a).

Of course, the idea of focusing on the attachment system does make sense to everyone and is an important part of human interactions. ... experiences with the caregiver shapes social and personality development in the child?. This requires massive explanatory power which attachment theory doesn't have and particularly when genetic variance in ...

Attachment theory delineates how emotional bonds with others influence our feelings of security and exploratory behavior in the world from, as Bowlby said, "Cradle to grave" (Bowlby, 1979). Attachment begins with the strong emotional bond felt between an infant and caregiver.

Attachment theory has achieved a major influence in social work practice as a basis for research and as a foundation for clinical approaches. The contention that attachment as it is contemporarily understood is a ubiquitous phenomenon has been labeled the universality hypothesis.

Are there meaningful relations between self-reported attachment style and narrative expressions of attachment systems in personal memories? Narrative exploration and ...

From his first attempts to explain attachment phenomena in the 1940s through his Attachment and Loss trilogy (Bowlby, 1969/1982, 1973, 1980), John Bowlby reformulated the theoretical underpinnings of attachment theory several times. He initially attempted to explain attachment phenomena in psychoanalytic terms. Then he invoked ethological theory in the explanation of ...

Attachment theory has achieved a major influence in social work practice as a basis for research and as a foundation for clinical approaches. The contention that attachment ...

We propose the Dynamic-Maturational Model (DMM) of Attachment and Adaptation as an integrative framework with potential explanatory power to address these problems. The DMM is a model of human adaptation, based in attachment theory and integrative of systems theory, psychodynamic psychology, cognitive neuroscience, ethology and ...

Attachment Trauma (AT) is a known clinical heuristic in Psychology. However, different perspectives on it have emerged, leading to heterogeneity and confusion. In pursuit of clarity, this paper aims to navigate the perspectives surrounding AT through an integrative ...

Explanatory power refers to the ability of a scientific theory or model to effectively clarify, account for, and predict phenomena within its domain. A theory with high explanatory power can not only describe events but also provide insight into the underlying mechanisms and relationships, making it a valuable tool in science.

This concept is closely linked to how theories relate to ...

Recent research that focuses on the attachment-exploration system and that is particularly relevant to applied and public policy issues will also be discussed. ... Sroufe argues persuasively that mother-infant attachment and wariness have considerable explanatory power when viewed as an interdependent, organizational construct encompassing the ...

The objective of this explanatory mixed-methods study is to compare Novaloc, a novel attachment system with such characteristics, to a traditional alternative for single implants in the mandible of edentate elderly patients. ... For both attachment systems, dentures will be tested intra-orally to confirm correct seating in centric occlusion and ...

Psychologists usually recognize the significant explanatory power of attachment theory (Cassidy and Shaver, 1999, 2008, 2016) ... These can be seen as strategies to regulate attachment activation - activating a non-attachment system to avoid that of attachment. For example, a child could activate caregiving with their mother, ...

Following a brief discussion of the behavioral system construct, including its species-universal and individual-differences aspects as they interact with social situations, we examine the ...
