This report provides an overview and status update on U.S. state renewables portfolio standards (RPS) and has been expanded from previous editions to also cover 100% clean electricity standards (CES) adopted by a growing number of states. ... Utility-Scale Renewable Energy and Storage, Renewables Portfolio Standard Resources. Related Files ...

Arizona adopted a renewable energy standard (RES) in 2006 that required regulated electric utilities source 15% of the electricity they sell from renewable resources by 2025. 88 A portion of each year's required renewable energy target had to come from non-utility, customer-sited generation.

In this report, we focus on one subset of renewable energy targets: renewable portfolio standards (RPSs). An RPS is a public policy tool requiring a certain amount of renewable electricity relative to the entire electricity supply. RPSs are an enforceable form of renewable energy targets (IRENA 2017); in order to be termed an RPS, there must be a

When in 2002 California chose to lead the nation with a first-of-its-kind modern renewable portfolio standard that 20% of the state's electricity come from renewable sources by 2017, its average price of electricity was 11.65 cents/kwh (160% of AZ average); today that cost has nearly doubled to 22.48 cents/kwh (200% of AZ average).
