

Be quiet system power 10 450w review

System Power 10 series is Tier C, low end, it would probably be fine but I wouldn't really recommend cheaping out on a power supply because cheaper units typically aren't that reliable. If you want something reliable that isn't too expensive, my suggestions are: Corsair RM750e (2023) EVGA SuperNova GT 750. Super Flower Leadex III Gold 750

be quiet!, the German manufacturer for premium PC components, introduces its System Power 10 series of power supplies with 450 to 850 Watts for Europe, and the System Power 10 U, with 550 to 850 ...

Be quiet! today launches their latest System Power 10 line of power supply units and with me i have the 850W variant. be quiet! is a premium brand of power supplies, PC cases and cooling solutions for desktop PCs. The products of be quiet! offer legendary quiet operation and first-class performance thanks the passion for quality and precision.

Be quiet system power 10 450w review

The PSU isn't particularly high quality but it does at least list over power protections on the product page, which means it should automatically shut off if it goes over 450W. A 3060 and 5600X won't draw more than 400, so unless you have a bunch of hard drives, LEDs and fans it's unlikely you'll ever even see 400W.

The be quiet! System Power 10 750 is among the worst affordable, branded PSUs I have evaluated. The competition is way ahead in this category, offering higher performance, quality, and universal voltage compatibility (100-240 V input) at about the same price.

I can get the be quiet System Power 10 (450w) for 50EUR, but I'm wondering if it's good enough. I know that be quiet is a reputable brand, but I've got no idea if their cheaper models are still ...
