Under its net billing plan, solar energy up to your home's monthly usage will be credited at the full-retail rate of electricity. Any solar energy produced that exceeds your home's energy usage for the month will be credited at a lower ...

What is a solar feed-in tariff? A feed-in tariff (FiT) is a small credit rebate that households receive for any excess electricity produced by a solar system or other small-scale generator. Simply put, unless you have a solar battery, any solar power produced by solar panels must be immediately used or it will feed into the shared electricity grid for other properties to use.

The amount of money you can save with solar depends upon how much electricity you consume, the size of your solar energy system, if you choose to buy or lease your system, and how much power it is able to generate given ...

While many people have grid-tied systems - which means energy use is supplemented by the power grid if panels don't produce enough solar power - and don't want or need batteries, 13% of ...

The best electricity plan for solar owners has a balance of high feed-in-tariffs, low usage tariffs and low daily charges. Solar owners are usually better off with simple, fixed tariffs. The best plan for solar + battery owners is often a time-of-use tariff with lower off-peak and shoulder rates.

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

In some cases, you may want to oversize your solar system. Many new residential solar system owners choose to build a system that produces around 10-20% more solar power than they can actually consume. This way, the 1-3% drop in efficiency of your solar PV array is taken care of even before the system is installed, and you get a more robust solar energy ...

Best electricity plans for solar panels
