1. The Body's Three Energy Systems. The human body uses three primary energy systems to fuel activity: the ATP-PC system, the glycolytic (or lactic acid) system, and the oxidative (or aerobic) system. Each of these systems is activated under different conditions based on the intensity and duration of the activity. A. ATP-PC System

Understanding energy systems training This is an excerpt from Periodization Training for Sports-3rd Edition by Tudor Bompa & Carlo Buzzichelli. Bridging the Theory - Practice Gap in Energy Systems Training. Coaches without real knowledge of energy systems often intuitively develop programs that train the dominant energy system for their sport.
