Whether your business specializes in solar, wind, geothermal, biomass, or even wave technology, you'll want a name that differentiates your brand from competitors.

Renewable energy can play an important role in U.S. energy security and in reducing greenhouse gas emissions. Using renewable energy can help to reduce energy imports and fossil fuel use, the largest source of U.S. carbon dioxide emissions. According to projections in the Annual Energy Outlook 2023 Reference case, U.S. renewable energy consumption will ...

Non-renewable fossil fuels (coal, crude oil, and fracked gas) supply people with about 80% of all energy consumed globally and in the United States. Their burning releases carbon dioxide, a major greenhouse gas that's accelerating climate change. Nuclear energy is a second type of non-renewable energy that makes up only 2% of global energy, but 8% in the U.S.

Renewable energy, also known as clean energy, is produced from natural resources that are generated and replenished faster than they are consumed--such as the sun, water and wind. Most renewable energy sources produce zero carbon emissions and minimal air pollutants. Fossil fuels (oil, coal and natural gas) on the other hand, are finite resources and ...
