

Chapter 1 fluid power systems in industry review quiz

Fluid in a closed fluid power system exerts pressure... ... exerts pressure equally in all directions. After a period of declining innovation, interest in fluid power was renewed in 1906 when... ... when the US military replaced electricity with hydraulics to lift and move the guns on the battleship USS Virginia.

Pascal's law states that in a closed system the occupied fluid hold shape of the container and exerts equal pressure in all of the direction. Fluid power system has the fluid in a closed container exerts equal pressure in all directions. Therefore, the answer is pressure.
