They provide valuable information for both designing and installing a system, as well as helping homeowners measure and control their energy consumption.

A fraction of the solar panels amp which amounts to about 3 amps is spared for charging a battery, intended to be used after sunset. We also assume that the solar panel is mounted over a solar tracker so that it is able to deliver the specified requirements as long as the sun is visible over the skies.. The input power of 36 volts is applied to the input of a regulator ...

I am not sure why you said 2pcs of 120ah12V battries in series. He needs batteres to supply the 1500w loads for 12hours at night. Basically that is $1500w * 12 = 18000wh$. dividing by 50% depth of discharge as you choose flooded, that is $18000/0.5=36000wh$ or divde by 0.8 if for AGM batteries, that is $18000/0.8 = 22500wh$.
