Philip H. Howard, 2016, Concentration and Power in the Food System: Who controls what we eat? Bloomsbury Publishing Inc., London and New York, 216 p. Book Review; Published: 02 March 2017; Volume 98, pages 221-224, (2017) Cite this article

The concentration of food, specifically in the context of condensed food, is based on the fact that many foods contain a large percentage of free water which can be driven off by evaporation, thereby reducing the weight and usually the bulk of the food.

This is unashamedly an exercise in Political Economy, focusing on the questions of how concentration is changing in the food system and what enables or constrains the goals of ...

1. Introduction. Concentration is a topic of longstanding interest, and a topic with a recent explosion in policy interest in the United States. In this chapter, we look at concentration in agribusiness and in agricultural production: its definition and measurement, patterns of concentration change, the drivers behind concentration, and the use of concentration ...

Howard, "Concentration and Power in the Food System" February 26, 2016. Abstract. This book seeks to illuminate which firms have become the most dominant, and more importantly, how they shape and reshape society in their efforts to increase their control.

Who controls what we eat? This book reveals how dominant corporations, from the supermarket to the seed industry, exert control over contemporary food systems. It analyzes the strategies these firms are using to reshape society in order to further increase their power, particularly in terms of their bearing upon the more vulnerable sections of society, such as ...

# Concentration and power in the food system notes

Nearly every day brings news of another merger or acquisition involving the companies that control our food supply. Just how concentrated has this system become? At almost every key stage of the food system, four firms alone control 40% or more of the market, a level above which these companies have the power to drive up prices for consumers and ...

The first is that corporate concentration in the food system is an important dimension to consider in debates about food system sustainability. ... (Altieri 1999). The Food and Agriculture Organization (FAO) of the United Nations, for example, notes that 75 percent of the world's crop genetic diversity was lost between 1900 and 2000 (Food ...

are needed to ensure that corporate concentration and power do not undermine key goals for food systems, such as food access, sustainability, and broad-based participation in food system governance. These include measures to strengthen competition policies, to bolster public sector support for diverse food systems, and to curb corporate ...

In this report, we continue our tradition of examining current levels of consolidation in the food system. We argue that consolidation results in a particular set of power relationships that have ...

This book reveals how dominant corporations, from the supermarket to the seed industry, exert control over contemporary food systems. It analyzes the strategies these firms ...

concentration of power in processing and agricultural inputs, and again notes the role of corporate influence over government policy. The prospect of achieving a fair and sustainable food system seems rather bleak in the face of the uneven concentration of ...

the food system and toward high concentration--with only a few buyers or sellers--in many of its markets. Some consolidation follows from economies of scale and innovation and can therefore be a channel for productivity growth. However, high concentration can, in some circumstances, lead to reduced efficiency, reduced innova-

Concentration and Power in the Food System, is posed, inviting readers to contemplate just who exactly is involved in supplying our food. The author, Philip H. Howard, uses this question as a ...

This report provides the latest updated data on the state of concentration in the agrifood system, and outlines what happens when a few hands control the way billions of consumers, farmers, and farmworkers work and eat. It also includes bold proposals for decentralizing our agri-food system to move power out of the control of just a few.

# Concentration and power in the food system notes

Howard's book, *Concentration and Power in the Food System: Who Controls What We Eat?* applies a critical political economy lens to the phenomenon of concentration of ownership and ...

*Concentration and Power in the Food System: Who Controls What We Eat?* invites readers to consider the networks of food production, distribution and consumption that shape the food system. Philip H. Howard focuses on a range of different industries to explore how food reaches our dinner plates in this excellent introductory text that will leave readers hungry to ...

This book - which has been revised and updated since its first publication in 2016 - explores how large firms exert control over the food system, how initiatives such as microbreweries and seed saving networks are opposing these power dynamics, and how Big Data and automation might shape the food system.

This Perspective makes the case that a range of measures are needed to ensure that corporate concentration and power do not undermine key goals for food systems, such as equitable livelihoods, sustainability and broad-based participation in food system governance.

At the same time, as *Concentration and power in the food system* 223 in many other countries, a general affection for the concept of the small farmer has led to a range of subsidies to farms in the USA. Yet it appears that the lion's share of ...

**ABSTRACT** The world has experienced three global food crises in the past 50 years. While unique triggers sparked each of these crises, they all exposed extreme concentration within the global industrial food system at multiple scales - at the field, country, and global market levels. This multi-level concentration heightens vulnerability to worldwide food crises that have ...

the health and sustainability of the country's food system are under threat. It is clear from the beginning of the book what Hauter's position is on the current food system. She believes that consolidation and concentration has undermined food policy, fostered an unsafe and unsustainable production and distribution

Corporate concentration and power can shape markets, technology and innovation agendas, and policy and governance frameworks. Issues, implications and mitigating measures to take in food systems are discussed here using the agricultural inputs industry as an example.

Power in the food system. Because we depend on food to live, concentration raises more concern in food

industries than in most other economic sectors. The importance of food also makes it a ...
