

# Concentration and power in the food system summary

It outlines the pathways via which concentrated firms in this sector have the potential to exert power in food systems more broadly--both directly and indirectly--in ways that matter for food system outcomes. Specifically, concentrated firms can shape markets, shape technology and innovation agendas, and shape policy and governance frameworks.

The U.S. food system supplies an abundance of food--an estimated 2,590 calories per citizen per day in 2010, after subtracting wasted food. <sup>7</sup> It also generates health and environmental hazards, such as packaging waste (middle) and pollution from industrial egg (left) and swine (right) operations. Such concentration of power undermines the long-term sustainability of the world's food supply. One idea that challenges this entrenched power in food and farming systems is the shift away from defining people as consumers towards calling them food citizens. As consumers we focus on the cost of our weekly food shop.

At the same time, as Concentration and power in the food system 223 in many other countries, a general affection for the concept of the small farmer has led to a range of subsidies to farms in the USA. Yet it appears that the lion's share of the subsidies goes to the largest farms, which are best able to negotiate the complex system of ...

While the preservation effects of food concentration are important, the main reason of most food concentration is to reduce food weight and bulk. Tomato pulp, which is ground tomato devoid of the skins and seeds, has a solid content of only 6 % and so a 3.78 liter can would contain only 230 g of tomato solids.

are needed to ensure that corporate concentration and power do not undermine key goals for food systems, such as food access, sustainability, and broad-based participation in food system governance. These include measures to strengthen competition policies, to bolster public sector support for diverse food systems, and to curb corporate ...

This Perspective makes the case that a range of measures are needed to ensure that corporate concentration and power do not undermine key goals for food systems, such as equitable livelihoods, sustainability and broad-based participation in food system governance.

Corporate concentration and power can shape markets, technology and innovation agendas, and policy and governance frameworks. Issues, implications and mitigating measures to take in food systems are discussed here using the agricultural inputs industry as an example.

It refers for instance to different dimensions of power (such as power to transform systems, or power to 1 At the level of innovation projects, literature on politics of innovation has highlighted ...

There is a definite connection in nutritional science between food and concentration. Food is fuel for the body, including the brain. If you don't fuel your brain, it will lead to brain fog, lack of concentration while studying, and laziness. What is the best food to eat while studying? Let's stick to healthy study snacks.

the health and sustainability of the country's food system are under threat. It is clear from the beginning of the book what Hauter's position is on the current food system. She believes that consolidation and concentration has undermined food policy, fostered an unsafe and unsustainable production and distribution

# Concentration and power in the food system summary

Nearly every day brings news of another merger or acquisition involving the companies that control our food supply. Just how concentrated has this system become? At almost every key stage of the food system, four firms alone control 40% or more of the market, a level above which these companies have the power to drive up prices for consumers and ...

He is also President of the Agriculture, Food and Human Values Society (AFHVS) and a member of the International Panel of Experts on Sustainable Food Systems. It will be released February 25th 2016 and is available for pre-order. description from Bloomsbury Publishing: About Concentration and Power in the Food System

Download Interview Transcript Download my FREE Podcast Video Link. Story at-a-glance. The trend is for fewer but bigger firms increasing their power to control what we eat; at the time Howard wrote his book, four European firms controlled the global beer market; six firms controlled the global seed market; two firms controlled food distribution in the U.S.

In this report, we continue our tradition of examining current levels of consolidation in the food system. We argue that consolidation results in a particular set of power relationships that have ...

Howard, "Concentration and Power in the Food System" February 26, 2016. Abstract. This book seeks to illuminate which firms have become the most dominant, and more importantly, how they shape and reshape society in their efforts to increase their control.

Who controls what we eat? This book reveals how dominant corporations, from the supermarket to the seed industry, exert control over contemporary food systems. It analyzes the strategies these firms are using to reshape society in order to further increase their power, particularly in terms of their bearing upon the more vulnerable sections of society, such as ...

**ABSTRACT** The world has experienced three global food crises in the past 50 years. While unique triggers sparked each of these crises, they all exposed extreme concentration within the global industrial food system at multiple scales - at the field, country, and global market levels. This multi-level concentration heightens vulnerability to worldwide food crises that have ...

Howard's overview of power distribution and concentration in food systems offers specific examples centered in a North American context; however, I feel that the broad lessons and concepts can be applied elsewhere. What sets this book apart from others is the use of illustrative tables and figures, which provide an effective and
