

# Design and simulation of a rotary power steering system

For improvement of contactless power transformer which is used in rotary steering system, this paper uses simulation method to study on the influence of the shape of the ferrite, the number of turns and installation position on the efficiency and power of the contactless power transformer.

In the context of automated driving, Electric Power Steering (EPS) systems represent an enabling technology. They introduce the ergonomic function of reducing the physical effort required by the driver during the steering maneuver. Furthermore, EPS gives the possibility of high precision control of the steering system, thus paving the way to autonomous driving ...

The modeling details of the mechanism subsystem, hydraulic supply lines subsystem and the rotary spool valve subsystem are provided and included in the integrated steering system ...

The results show that the electronically controlled hydraulic power steering system can significantly improve high-speed steering feel compared with the hydraulic power steering system while ...

The steering system of a vehicle impacts on the vehicle performance, safety and on the driver's comfort. Moreover, in off-road vehicles using hydrostatic steering systems, the energy dissipation ...

Directional drilling is a common and essential procedure of major extended reach drilling operations. With the development of directional drilling technologies, the percentage of recoverable oil production has increased. However, its challenges, like real-time bit steering, directional drilling tools selection and control, are main barriers leading to low drilling efficiency ...

This paper presents a control technique for Electric Power Steering System (EPS) using Permanent Magnet Synchronous motor (PMSM) for steering application, which provides the additional assist torque along with the driver input to steer the vehicle. This paper presents a control technique for Electric Power Steering System (EPS) using Permanent Magnet ...

In [], it was shown that previous controls of electric steering systems often have a low robustness against nonlinear characteristics and degrees of freedom of the plant which are unconsidered in the control design. Therefore, a control of the driver's steering torque of electromechanical power steering (EPS) systems was presented in [1, 2] that solves this ...

in Static Push-type Rotary Steering Drilling System. ... Contactless power transformer; Simulation; Experiment The execution system of the static push-type rotary steerable drilling system consists of a non-rotating casing and a rotating shaft, and does not rotate the relative rotation between the casing and the rotating shaft, and the ...

Hydraulic integrated power using signals from wheel speed sensors and wheel torque steering ( HIPS ) program has been developed using basic sensor and the application of HIPS for design optimization is demonstrated. Hydraulic rack and pinion power steering system is a high This increases the differential pressure acting on the power bandwidth servo with stringent ...

The diagram of EHAS system is shown in Fig. 1, including hydraulic structure and mechanical structure. The hydraulic pump is driven by assist motor and deliver hydraulic oil to the rotary valve. The rotation of the steering wheel makes the difference in port area of rotary valve, which causes the pressure difference between the two sides of the rotary valve.

In order to analyze the assist performance of a rotary valve hydraulic power steering system, a co-simulation model of the hydraulic power steering vehicle was established in AMESim and LMS Virtual.

The simulation results show that dead zones, hysteresis, and frequency response of control valve have great influence on the steering performance, and the servo solenoid valve is proper for this ...

Nowadays, almost every modern vehicle uses a power steering system to help the driver steer. The most popular power steering systems in the automotive market can be divided into three types, namely, hydraulic power steering (HPS) system, electrohydraulic power steering (EHPS) system, and electric power steering (EPS) system. 1-6 The HPS system was ...

1. Introduction. The vehicle steering system is a bridge and link connecting the human-vehicle-road closed-loop system. Its performance not only affects the handling feeling [1], [2] but also is an important part of the vehicle energy flow [3]. With the increasing requirements for energy conservation, environmental protection and safety, the energy saving and ...

The steering system includes a variety of structural types, such as mechanical, hydraulic, electronic, and electro-hydraulic power steering systems (EHPSS). 3-5 Mechanical and conventional hydraulic steering systems are unable to meet the requirements of flexibility and stability in multi-axle vehicles very well. Electronic power steering systems cannot effectively ...

power system. A hydraulic power steering (HPS) uses hydraulic pressure supplied by an engine-driven pump to assist the motion of turning the steering wheel. Electric power Design and Simulation of Four Wheel Steering System for LMV K. Ruban #1, V. Sathishkumar #2, R. Shanmugavelan #3, S. Srinath #4 and R. Ramesh #5

The paper introduces a comprehensive mathematical model for power steering systems mounted on cars. Dynamic modelling for the steering system is studied in consideration of nonlinear friction forces in the system such as friction in the steering column, friction in the steering mechanism (gear and rack), friction between tires with road.
