Desktop computer backup power

A battery backup, or uninterruptible power supply (UPS), is primarily used to provide a backup power source to important desktop computer hardware components. In most cases, those pieces of hardware include the main computer housing and the monitor, but other devices can be plugged into a UPS for backup power, depending on the size of the UPS.

(Image credit: Future) Click the Next button. (Optional) Select the "Format and repartition disks" option before restoring the backup.; Quick tip: If you choose this option, use the "Exclude disks ...

Essentially, your PC shouldn't know the difference between your UPS battery power and the power coming from the wall. Simulated sine-wave UPS delivers a stepped, approximated waveform using pulse-width modulation (PWM). That's the same concept used to control PC case fan RPM.
