Being smaller than a standard EV battery, a hybrid battery is cheaper to replace, but it can still be quite expensive. A big factor in price is how old and what make the hybrid car is. Unlike replacing a regular 12-volt car battery, the batteries in hybrid and electric vehicles require specialised tooling and know-how.

The hybrid battery is a high-voltage battery, on the order of 300 volts. There are two main types of batteries: nickel-metal hydride (Ni-MH) and lithium-ion (Li-ion). Lithium-ion is more expensive, but they're also more compact.

First and foremost, it is important to understand the composition of batteries in hybrid cars. Most hybrid vehicles use nickel-metal hydride (NiMH) batteries, although some newer models are utilizing lithium-ion (Li-ion) batteries. Both types of batteries can be recycled, but the process and cost vary.

Most hybrid vehicles use nickel-metal hydride (NiMH) batteries, although some newer models are utilizing lithium-ion (Li-ion) batteries. Both types of batteries can be recycled, but the process and cost vary. Recycling NiMH batteries involves several steps. Initially, the batteries are broken down into their individual components.
