

The European Association for Storage of Energy (EASE) is glad to extend a warm welcome to its newest member Apliq who joined EASE in September 2024. Lukas Gresnigt, Head Business Division International at Alpiq and Antonio Zecchino, Lead Storage Developer at Alpiq, accepted to discuss with us the expertise of Alpiq, in energy storage and expectations from ...

The purpose of Energy Storage Technologies (EST) is to manage energy by minimizing energy waste and improving energy efficiency in various processes [141]. During this process, secondary energy forms such as heat and electricity are stored, leading to a reduction in the consumption of primary energy forms like fossil fuels [142].

The aim is to inform policymakers for research, innovation, and demonstration in the energy storage sector in order to further strengthen Europe's research and industrial competitiveness in the energy storage industry. Please find more information on the EASE-EERA Energy Storage Technology Development Roadmap 2017 [here](#).

Longer Duration Energy Storage technologies are expected to grow dramatically in the next years. But concerns on the business case remain: what tools to properly remunerate such solutions? ... o David Post, President, European Association for Storage of Energy (EASE) 2.6 Making it happen: how to actually bring a BESS project to reality ...

EASE seeks to ensure that technology neutrality is a defining feature of EU energy storage policy: the whole "toolbox" of different energy storage solutions should be developed and deployed across the EU in order to provide flexibility in different locations and at different timescales.

EASE members welcome the European Commission's Energy Roadmap 2050 of 15 December 2011, particularly as this communication recognises the vital role of storage technologies for a progressively decarbonised European energy system.

Joining EASE is a strategic step for Topband in aligning with leading European energy stakeholders to further the advancement of energy storage technologies. We are particularly enthusiastic about participating in initiatives that focus on integrating renewable energy sources with existing grid systems to create more resilient energy ...

Here the authors applied an optimization model to investigate the economic viability of nice selected energy storage technologies in California and found that renewable curtailment and GHG reductions highly depend on capital costs of energy storage.

Smareg 4, a utility-scale BESS project in Germany. Image: Smart Power. The European Union's Green Deal Industrial Plan has been welcomed by the European Association for Storage of Energy (EASE), although more

detailed pledges of support for energy storage included in a leaked draft seen by the industry group were absent from the final publication.

The Energy Storage Global Conference 2022 (ESGC), held in Brussels and organised by EASE - The European Association for Storage of Energy, as a hybrid event, on 11 - 13 October, gathered over 350 energy storage stakeholders, and revolved around ...

On 18 October 2017, the European Association for Storage of Energy (EASE) and the European Energy Research Alliance (EERA) presented the updated EASE-EERA Energy Storage Technology Development Roadmap to the European Commission at a launch event attended by key stakeholders from across the energy sector.

Mainstream energy storage in the European Commission's implementation of the REPowerEU action plan and in the ongoing review of the Electricity Market Design. EASE has responded to the European Commission's Public Consultation on "Renewable Energy Projects - Permit-Granting Processes & Power Purchase Agreements .

6 EASE/EERA European Energy Storage Technology Development Roadmap DRAFT - FOR PUBLIC CONSULTATION air energy storage, and pumped hydro storage), and thermal energy storage (broken down into sensible heat storage, latent heat storage, and thermochemical heat storage). For each of these technologies, there is a description of its technical ...

EASE said energy storage is a "crucial tool" to boost energy security and industrial competitiveness, help lower energy bills across Europe and enable decarbonisation. ... Clean energy technologies can also help stabilise and reduce consumer and industry exposure to high and volatile electricity prices. At the same time, the risk of falling ...

The EASE Secretariat prepared an analysis the revision of the Renewable Energy Directive (RED III and RED III.5), which entered into force on 20 November 2023 ... EASE has prepared an analysis of the published Strategic Technologies for Europe Platform (STEP) and its potential impact on the energy storage industry. [READ MORE](#)

Other storage technologies 28 ... The European Association for Storage of Energy (EASE), established in 2011, is the leading member-supported association representing organisations active across the entire energy storage value chain. EASE represents over 70 members including utilities, technology suppliers,

The European Association for Storage of Energy (EASE) is the voice of the energy storage community, actively promoting the use of energy storage in Europe and worldwide. ... ciency is lower than other bulk energy storage technologies such as CAES or Pumped Hydro Storage, it provides a long term seasonal storage capability and the flexibility to ...

Ease energy storage technologies

The first joint EASE/EERA Technology Development Roadmap on energy storage¹¹ was published in 2013 with the goal of identifying the most pressing technology development priorities for the European energy storage industry.

Description Batteries are an energy storage technology that uses chemicals to absorb and release energy on demand. Unlike many other forms of energy storage, batteries can provide ... o EASE divides the applications into five main categories: 4. Applications 27 Energy Storage Applications - Summary Generation Support Services and Bulk

16 March 2023: EASE - The European Association for Storage of Energy welcomes the proposed Net-Zero Industrial Act is encouraging to see that not only batteries, but all energy storage has been included as a Net-Zero Strategic Technology.. The inclusion of energy storage in the proposed Net-Zero Industrial Act is a welcome development, as it is a core strategic industry ...

The European Association for Storage of Energy (EASE) is the voice of the energy storage ... Energy storage technologies are crucial for achieving the European climate energy objectives as defined in the European Union's (EU) "20-20-20" targets¹ and in the European Commission's

Thermal Energy Storage. EASE has prepared an analysis that aims to shed light on the numerous benefits of thermal energy storage (TES) by providing an overview of technologies, inspiring ...

The roadmap provides a comprehensive overview of the energy storage technologies being developed in Europe today and identifies the RD& D needs in the coming decades. On this basis, the roadmap provides recommendations for R& D policies and regulatory changes needed to support the development and large-scale deployment of energy storage technologies.

Even though each thermal energy source has its specific context, TES is a critical function that enables energy conservation across all main thermal energy sources [5] Europe, it has been predicted that over 1.4 × 10¹⁵ Wh/year can be stored, and 4 × 10¹¹ kg of CO₂ releases are prevented in buildings and manufacturing areas by extensive usage of heat and ...

Bulk energy storage technologies (e.g. thermal storage, power-to-x, CAES and LAES) can support variable RES integration by providing long term/seasonal balancing. energy security. EASE Student Award's winner, Oliver Schmidt, published a study on "future cost of energy storage based on experience rates", available on the EASE website.

EASE has prepared an analysis that aims to shed light on the numerous benefits of thermal energy storage (TES) by providing an overview of technologies, inspiring projects, business cases, and revenue streams. Policy recommendations are also discussed.

The Energy Storage Roadmap was reviewed and updated in 2022 to refine the envisioned future states and

Ease energy storage technologies

provide more comprehensive assessments and descriptions of the progress needed (i.e., gaps) to achieve the desired 2025 vision. ... Energy Storage Technology Webcast: Results from Southern California Edison's Testing of a Tesla Powerpack 2.0 ...
