AEC was established in January 2009 to combine the engine controls businesses of the two companies. The joint venture principally designs and manufactures engine control systems including electronic engine controllers, fuel pumps and fuel metering units for a wide range of Rolls-Royce engines and for a number of other programmes.

this aspect of engine control systems remains a challenge. Small turbine engine systems, specifically the turbo-shaft engine systems that power helicopters, share a common legacy with the propulsion systems used in larger commercial and military aircraft. The base technology is similar; however, the control requirements tend to be more severe.

Rolls-Royce Controls and Data Services Limited provides safety critical controls and asset intelligence solutions [buzzword] for industrial power, marine, civil and military aerospace. It produces engine control software, electronic engine controls (EEC), fuel metering units (FMU), fuel pumps and engine actuators for a large number of common commercial and military ...
