Any help out there? ... Enphase enlighten app> Menu> System> Devices>Microinverter. This could either be a string issue, or with the grid profile.

Inverter systems convert the direct current (DC) from your PV panels into alternating current (AC), which is the form of electricity standard in homes and the utility grid. After passing through your inverter system, your solar power can then be safely sent to your home's electrical panel and distributed to your appliances and devices.

Enphase microinverters, which are installed beneath each solar panel, convert DC power produced by the panels into usable AC power. Each microinverter sends AC power to your home's electrical panel (load center) and transmits performance data using your home's electrical wiring to the Enphase IQ Gateway.

Using: 14 x 360W panels (Panasonic EVPV360K). Enphase IQ7+ microinverters. If someone (e.g. home insurance company) asks for my "system size", should I say: A) 5.04 kW (this is what my Solar installer first indicated in the contract/specs), B) 4.1 kW (maximum I see in Enphase Enlighten), C) 4.63 kW (this is what my electric company reports in ...

How Solar Inverters Work. Solar panels output power in direct current (DC) while homes, businesses, and the grid are configured in alternating current (AC). A solar inverter converts DC to AC power, seamlessly integrating the solar system with the grid. Unlike String Inverters, with Enphase or SolarEdge, solar panels are individually optimized.
