Kiterjed "alvás"És"Aludj utána", állítsa „Soha" értékre, vagy adjon meg 0-t.Kattints Apply és OK a módosítások mentéséhez.; Indítsa újra a számítógépet, és ellen?rizz, hogy a hiba továbbra is fennáll-e. 2. Tiltsa le a Gyorsindítást. A Windows rendszeren a Kernel Power 41-es hibáját a Gyorsindítás funkció is okozhatja, amelyet a rendszerindítási id? ...

The Windows 10 error Event ID 41 "Kernel-Power" is about power and isn't a Windows issue at all you'll be pleased to know. What you may not be so pleased to hear is that it is usually a sign of a faulty PSU or power input. If you need to fix Windows 10 error Event ID 41 "Kernel-Power", here's what you can do.

I'm not saying that this is your issue, but I get kernel power 41 issues when tuning curve optimizer settings on Ryzen CPUs, which is reducing the voltage that the CPU cores receive. If I set the curve optimizer too low, my PC will crash and when I look back in the event viewer it will say kernel power 41.

You can meet the event ID 41 kernel power when your driver is out of date. Device drivers are very important because they are used to inform your system and other software how to interact with some specific hardware. In common cases, all drivers will be updated when you update Windows, but there is a possibility that some drivers were not updated.

The Kernel-Power source is associated with power-related events in Windows. Event ID 41 is often logged when the system restarts unexpectedly, and the cause of the shutdown is not recorded. This event can occur due to various reasons, including hardware issues, driver problems, power supply fluctuations, overheating, or software conflicts.

Check Power Supply: Verify that your power supply unit (PSU) is providing stable power and that it has enough capacity to support your system's power demands 3. Memory Test: Run a memory test to rule out any issues with your RAM.

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 22/11/2020 20:13:26 Event ID: 41 Task Category: (63) Level: Critical Keywords: (70368744177664),(2) User: SYSTEM Computer: DESKTOP-KOHU5V1 ... Error: Event ID: 41 Description: The system has rebooted without cleanly shutting down first.

The Kernel power Event ID: 41 error is generated under different scenarios where the computer is shut down or restarts unexpectedly. When the computer that is running Windows is started, a check is performed to determine whether the computer was cleanly shut down.
