Orbit (anterior view) The eyes are essential for our daily experience, since about 70% of information we gather is by seeing. They are placed within the orbits, two cavities in the upper face, in the anterior surface of the head.. Besides the eyes, the orbits host several structures that support the eyeballs, including muscles, vessels, nerves and a gland.

The irises of human eyes exhibit a wide spectrum of colours. Eye color is a polygenic phenotypic trait determined by two factors: the pigmentation of the eye's iris [1] [2] and the frequency-dependence of the scattering of light by the turbid medium in the stroma of the iris. [3]: 9 In humans, the pigmentation of the iris varies from light brown to black, depending on the ...

The clear, dome-shaped surface that covers the front of the eye. Iris. The colored part of the eye. The iris is partly responsible for regulating the amount of light permitted to enter the eye. Lens (also called crystalline lens). The transparent structure inside the eye that focuses light rays onto the retina. Lower eyelid.

The outer covering of the eyeball consists of a relatively tough, white layer called the sclera (or white of the eye).. Near the front of the eye, in the area protected by the eyelids, the sclera is covered by a thin, transparent membrane (conjunctiva), which runs to the edge of the cornea.The conjunctiva also covers the moist back surface of the eyelids and eyeballs.

Eye in the Sky: Directed by Gavin Hood. With Faisa Hassan, Aisha Takow, Armaan Haggio, Helen Mirren. Col. Katherine Powell, a military officer in command of an operation to capture terrorists in Kenya, sees her mission escalate when a girl enters the kill zone, triggering an international dispute over the implications of modern warfare.

4. Red eyes. When your eyes become irritated or inflamed, the blood vessels expand, causing the white parts of your eyes to appear pink or red. This can be caused by a number of factors, including allergies, smoke and pollutants in the air around you.. If you suddenly notice red eyes, you may have an eye condition that, in serious cases, can potentially cause long-term eye ...

Why Do Animal Eyes Shine at Night? Before we look at what colors go with actual animals, let's talk a bit about the science. Many animals have a thin reflective membrane at the back of their eyes, known as tapetum lucidum.This reflective membrane layer lies behind the iris and acts as a retroreflector, which means it reflects

light back at the source - in this case, ...
