What I have got now for this fictional solar system, all calculated on these two web sites I mentioned, is a star with a initial mass 50% greater than the sun, with a planet 2,93 au away from it. The revolution period is 1497 days, thus approximately 4 years. The planet is expected to go through about 1/4 of the period of time that Earth has ...

Planets outside of the Solar System have appeared in fiction since at least the 1850s, long before the first real ones were discovered in the 1990s. Most of these fictional planets do not differ significantly from the Earth, and serve only as settings for the narrative. The majority host native lifeforms, sometimes with humans integrated into the ecosystems.

Science fiction films often tell stories set on other worlds, allowing for the exploration of new elements, technologies, and species that don't exist on Earth. Films like Avatar, Solaris, and Dune take audiences on intergalactic adventures, showcasing rich world-building, complex political systems, and a blend of fantasy and sci-fi elements.

I've noticed a lot that solar system generation tools (e.g. rollforfantasy, SOSSG (now obsolete, though you can find a non-functioning archive at this link, N=0.012, etc) are not detailed enough (don't detail or include moons, don't provide statistics about the planet, etc) or are very unrealistic. Thus, I've decided to make my own: WalkerSysGen, which generates detailed ...
