

How much can you sell solar power for

Businesses generating their own solar power enter into a billing and metering agreement, called a netmetering agreement, with a local power utility when connecting a photovoltaic system to the grid.

One benefit of a residential solar power system is the ability to offset your electric costs by selling excess power back to your local utility company. Home solar electric systems produce power continuously during the hours of direct sunlight. Frequently, the power produced during these hours is more than the power consumed by the home during the same time period.

All of our residential electricity plans include solar buyback so you can choose the electricity plan that best meets your household needs, and still earn solar buyback credits. Our solar buyback allows you to earn credits each month for the surplus generation your panels create that is returned to the grid.

Typically, exporting during peak demand times can fetch a higher rate. Is it worth selling solar power back to the grid? Selling your energy back to the National Grid is worth it since you're converting the excess into cash.
