

# How much is a sunpower solar system

SunPower reports that, on average, solar panels cost between \$2.65 and \$4.20 per watt, but keep in mind that is the average of all brands on the market. To get a customized estimate from SunPower, you'll still want to reach out.

The installed average cost of a home solar system in the US is around \$3.06 per watt, according to the Solar Energy Industries Association (SEIA). When using SunPower panels, you can expect to pay around \$3.35 per watt, according to system pricing data gathered by EnergySage.

Since SunPower solar systems are more expensive than most, you stand to save more on a system with SunPower than you would from most other providers. The average ITC value when you go solar with SunPower is around \$10,800, whereas the average value from other providers would be \$8,991. That's an additional potential savings of almost \$2,000.

When you buy out your lease and own your panels, your solar system becomes part of the overall value of your home. So, when you put your house on the market, the value of your panels can be factored into the sale price of your home. A leased system also increases home value, but studies show the increase is less than for a purchased system.

These appliances do demand a certain amount of energy while in use and should be considered when planning for a solar system. With a trusted SunPower custom quote in hand, homeowners can move toward their clean energy future with confidence. SunPower dealers will discuss options for paying for the solar system, These include purchasing or ...
