Organic photovoltaic (OPV) solar cells are earth-abundant and low-energy-production photovoltaic (PV) solutions. They have the theoretical potential to provide electricity at a lower cost than first- and second-generation solar technologies.

DOE invests in multijunction III-V solar cell research to drive down the costs of the materials, manufacturing, tracking techniques, and concentration methods used with this technology. ... and multijunction cells made from CIGS, CdSe, silicon, organic molecules, and other materials are being investigated. In the past, multijunction devices ...

On October 21, 2024, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) hosted a webinar to provide an update on SETO's Photovoltaics (PV) End-of-Life (EOL) Action Plan, which outlines a five-year strategy to establish safe, responsible, and economic solar PV EOL practices. While PV has a net positive environmental impact over a system's life span, ...

If you have an innovative but risky solar energy research idea, you've come to the right place! The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) just opened another round of its annual Small Innovative Projects in Solar (SIPS) funding opportunity, which will provide up to \$6.5 million to support targeted, early-stage ideas in solar energy ...

The SunShot National Laboratory Multiyear Partnership (SuNLaMP) funding program enables our country's national laboratories to address the most impactful barriers to the advancement of photovoltaic (PV) technologies. Research at these labs has advanced key PV technologies and has enabled the solar industry to grow. The work of the national laboratories continues to be ...

the installed cost of solar energy systems, including photovoltaic systems. If successful, SunShot will enable PV to meet 15-18% of America's electricity needs by 2030. To learn more about DOE's solar activities, visit solar.energy.gov and energy.gov/sunshot DOE/GO-102011-3333 o June 2011

Office: Solar Energy Technologies Office FOA Number: DE-FOA-0003058 Link to Apply: Apply on EERE Exchange FOA Amount: \$36 million On September 12, 2023, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) released the Advancing U.S. Thin-Film Solar Photovoltaics funding opportunity, which will award \$36 million for ...

This summary of the Photovoltaics portion of the 2022 Solar Energy Technologies Office (SETO) Peer Review covers discussions between reviewers and their discussions with SETO's awardees. ... While perovskites are clearly a very promising technology in emerging PV, there were two Si projects, one organic project, two CIGS; and one of the Si ...

The Small Innovative Projects in Solar (SIPS) awards in PVRD are high-risk, single-year PV research and development projects that demonstrate the potential for expanded work in novel or emerging areas of PV research. The multi-year projects listed below are larger, collaborative projects with the potential to produce dramatic progress towards a ...

The Solar Futures Study explores solar energy's role in transitioning to a carbon-free electric grid. Produced by the U.S. Department of Energy Solar Energy Technologies Office (SETO) and the National Renewable Energy Laboratory (NREL) and released on September 8, 2021, the study finds that with aggressive cost reductions, supportive policies, and large-scale ...

The Solar Energy Technologies Office Fiscal Year 2021 Photovoltaics and Concentrating Solar-Thermal Power Funding Program (SETO FY21 PV and CSP) funds research and development projects that advance PV and CSP to help eliminate carbon dioxide emissions from the energy sector.. On October 12, 2021, SETO announced that 40 projects were awarded \$40 million.

The Photovoltaic Research & Development (PVRD) funding opportunity will fund approximately 30 to 35 projects that will advance the limits of photovoltaic cell and module performance toward and beyond the 2020 SunShot goals. Successful applicants will demonstrate a convincing ability to improve the power conversion efficiency, fielded energy ...

Organic photovoltaics are particularly appealing to the building-integrated PV market due to the availability of various absorbers for creating colored or transparent devices. They have achieved efficiencies near 11% but efficiency limitations and long-term reliability remain significant barriers.

The Department supports the domestic photovoltaics (PV) industry and research enterprise in achieving widespread cost-competitiveness without subsidies through an applied research and ...

The Department of Energy (DOE) funds research and development projects related to organic photovoltaics (OPV) because of the unique benefits of the technology. Here's a list of the projects, a summary of the benefits, and a discussion on the production and manufacturing of this solar technology.

Approximately half the world's solar cell efficiency records, which are tracked by the National Renewable Energy Laboratory, were supported by the DOE, mostly by SETO PV research.

Silicon . Silicon is, by far, the most common semiconductor material used in solar cells, representing approximately 95% of the modules sold today. It is also the second most abundant material on Earth (after oxygen) and the most common semiconductor used in computer chips. Crystalline silicon cells are made of silicon atoms connected to one another to form a crystal ...

The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) funds competitive research

Https www energy gov eere solar organic photovoltaics research

and development projects in three technology areas: photovoltaics (PV), concentrating solar-thermal power (CSP), and systems integration with the goal of improving the affordability, reliability, and domestic benefit of solar technologies on the grid.

Solar Energy Research Database. Solar Energy Resources ... Project Summary: This project will advance the practical viability of organic photovoltaics (OPV) by demonstrating reliable, large area and high-efficiency organic multijunction cells based on small molecule materials systems. The implementations in academic labs will be transferred to ...

The DOE Bridging Research Interactions through collaborative Development Grants in Energy (BRIDGE) program funds collaborative research teams to significantly lower the cost of solar energy systems. The teams can access the tools and staff expertise at existing DOE Office of Science research facilities so fundamental scientific discoveries can ...

NREL developed the Computational Database for Active Layer Materials for Organic Photovoltaic Solar Cells with calculations on electronic properties of tens of thousands of new polymers and small molecules that are potential candidates for new absorbers.

installed cost of solar energy systems, including photovoltaic systems, to achieve grid cost parity. If successful, SunShot will enable PV to meet 15-18% of America's electricity needs by 2030, making the U.S. a leader in the 21st century global clean energy race. To learn more about solar at DOE, check out energy.gov/sunshot. energy.gov

The U.S. Department of Energy (DOE) national laboratory system is an integral resource for the Solar Energy Technologies Office (SETO) to invest in innovative research and development that will enable solar to increase its contribution to the reliability and resilience of the nation's electricity grid and continue to drive down costs, while also developing next-generation solar ...

The Photovoltaics (PV) team supports research and development projects to lower manufacturing costs, increase efficiency and performance, and improve reliability of PV technologies. This is done in order to support the widespread deployment of electricity produced directly from sunlight ("photovoltaics").

** This webpage was updated on 07/25/2022 to extend the Letter of Intent deadline to 8/5/2022. ** Office: Solar Energy Technologies Office FOA Number: DE-FOA-0002582 Link to Apply: Apply on EERE Exchange FOA Amount: \$29 million The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) announced the Fiscal Year 2022 ...

The U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) Small Innovative Projects in Solar (SIPS) 2024 funding program provides \$5.4 million for seedling R& D projects that focus on innovative and novel ideas in photovoltaics (PV) and concentrating solar-thermal power (CSP) and are riskier

than research ideas based on established technologies.

National Technology Roadmap: Organic PV Subject: Solar Program document overviews organic photovoltaics (polymers, dendrimers, small molecules, and dyes as absorbers or transporters) and provides a roadmap with metrics and R& D tasks. Keywords: NREL/MP-520-41738; June 2007 Created Date: 6/8/2007 10:19:34 AM

PV prototype by 2012. The PV Technology Pre-Incubator targets the R& D advances Photovoltaics The U.S. Department of Energy's (DOE's) Solar Energy Technologies Program (SETP) works with national labs, academia, and industry to develop cost-competitive solar energy systems. SETP's Photovoltaics (PV) subprogram aims to accelerate research and

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m² and a rated power of 400 watts, corresponding to an efficiency of 21.1%. The monofacial modules were assembled in the United States in a plant producing 1.5 GW dc per year, using n-type crystalline silicon solar ...

Project Summary: NREL seeks to dramatically improve solar photoconversion efficiency in amorphous silicon (a-Si) and organic-based photovoltaic (PV) technologies by breaking the Shockley-Queisser limit. The research team is implementing a strategy that allows single-junction solar cells to harvest a wider portion of the solar spectrum ...

Project Name: Fault Tolerant, Shade Tolerant High Voltage PV Modules Location: Tempe, AZ SETO Award Amount: \$180,000 Awardee Cost Share: \$20,000 Principal Investigator: Stuart Bowden Project Summary: This project is developing a solar cell architecture called the M-CELL, which enables higher voltage and lower current than conventional photovoltaic modules. . The ...

What is photovoltaic (PV) technology and how does it work? PV materials and devices convert sunlight into electrical energy. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power. These cells are made of different semiconductor materials and are often less than the thickness of four human hairs.

View the Solar Energy Technologies Office (SETO) solar energy funding programs past and present, including funding amounts and year announced. ... Photovoltaic Research and Development: Small Innovative Projects in Solar (PVRD-SIPS) PV: ... Energy.gov Resources. Budget & Performance; Covid-19 Response; Directives, Delegations & Requirements ...
