by lithium batteries subject to certain conditions. The following items must only be packed in carry-on baggage: Portable power banks - these are portable power supplies that allow you to charge other electrical devices.

A power bank is a portable charger that uses a rechargeable battery to supply power to electronic devices. The capacity of a power bank correlates directly with the energy density of the battery it uses. Lithium-Ion batteries, which are used in power banks, have higher energy density than Lithium-Polymer batteries. Therefore, a power bank with a Lithium-Ion battery can store more energy and charge a device multiple times.
