Half-cell solar modules have solar cells that are cut in half, which improves the Solar Module `s performance and durability. Traditional 60-cell and 72-cell Solar Panels will have 120 half-cut cells and 144 half-cut cells, respectively. When solar cells are halved, their current is also halved, so resistive losses are lowered and the solar cells can produce more power.

A traditional solar panel is made up of a number of solar cells - usually 60 or 72. Aptly named, half cell solar panels are made up of cells that have been cut in half (120 or 144 half cells). The cut cells can be polycrystalline but are usually monocrystalline PERC for the greatest results.
