

NFPA 855--the second edition (2023) of the Standard for the Installation of Stationary Energy Storage Systems--provides mandatory requirements for, and explanations of, the safety strategies and features of energy storage systems (ESS).

The following list is not comprehensive but highlights important NFPA 855 requirements for residential energy storage systems. In particular, ESS spacing, unit capacity limitations, and maximum allowable quantities (MAQ) depending on location.

52.3.2.2.1. Fire areas within buildings containing stationary storage battery systems exceeding the maximum allowable quantities in Table 52.3.2.2.1 shall comply with all applicable ordinary-hazard and high-hazard requirements as identified in 6.2.2 of NFPA 101 and the building code.

Energy storage facilities use the most advanced, certified battery technologies. Batteries undergo strict testing and evaluations and the energy storage system and its components comply with required certifications detailed in the national fire protection safety standard, NFPA 855.

NFPA is undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise.

To access a specific NFPA Standard from the List, select the "Read More" button. Help safeguard the installation of ESS and lithium battery storage. Update to NFPA 855, Standard for the Installation of Stationary Energy Storage Systems.

Early in 2024, the International Code Council published its International Fire Code (IFC) 2024. That code, like the International Building Code (IBC) 2024 and the National Fire Protection Association (NFPA) 855, provides updated guidelines for the safe storage of lithium-ion batteries.

Association has issued the following Tentative Interim Amendment to NFPA 855, Standard for the Installation of Stationary Energy Storage Systems, 2023 edition. The TIA was processed by the Technical Committee on Energy Storage Systems, and was issued by the Standards Council on August 25, 2023, with an effective date of September 14, 2023. 1.

Here, we'll clearly explain the essential information you need: where you can install your batteries, how many batteries you are allowed per location, and the special safety rules you must follow according to NFPA 855 2020 standards.
