Other devices, Nintendo devices, they all have same technology and chemistry in the battery. All lithium ion battery are going to suffer from being constant at around 100%. So no matter what Nintendo tells you, they haven't invented new battery for the switch. The battery should be treated as the batteries in other devices.

It seems that the Nintendo Switch JoyCons have a 525MAH lithium ion battery. With this in mind, the question that pops up is will games like ARMS drain the Nintendo Switch JoyCons battery faster?

The Nintendo Switch is equipped with a built-in rechargeable battery, and it does indeed use a lithium-ion battery. This type of battery provides several advantages for the console, including: - Longer Playtime: Lithium-ion batteries have a higher energy density compared to other battery types, allowing the Nintendo Switch to provide longer ...

Bending a lithium-ion battery even slightly can create uneven spots between the thin layers inside the battery. The battery may function fine for awhile, but over time and charge cycles, the uneven area can wear down faster, eventually resulting in an electrical short. The battery would fail, swell up, and possibly catch on fire.

For Nintendo Switch on the Nintendo Switch, a GameFAQs message board topic titled "Weird burning
