

5. Connect Your System to the Grid. Connecting your solar panels to the grid is an important step in the process of going solar. The steps involved in connecting your solar panels to the grid include: Obtain permission: You will need to obtain permission from your local utility company to connect your solar panel system to the grid.

8000 watts / 400 watts solar panels = 20 solar panels. There you have it. Based on this simple formula, this family home needs 20 solar panels and 11 batteries. You can always add or sacrifice # of panels or # of batteries based on your budget. Going off grid is more pricey than a grid-tied system due to the cost of adding batteries.

Solar Energy Kits For Grid tie, Off Grid and Hybrid applications Find the kit that suits your best needs. Chose from a selection of off-grid, grid tied or hybrid kits. That are Both DIY friendly and will also match your client's needs. Chose kits that work as a back up source or off set your electrical needs.

You need to live in a sunny climate for this off-grid system to provide sufficient solar power. If you have relatively low energy usage and you live in a location with plenty of sunshine, this might be the right system for your needs. It will cost around \$14,925. Take your remote cabin or tiny home off the grid with this setup.

An off-grid solar system will require the following: Solar panels; A mounting system; Batteries; A charge controller; An inverter; Optional: A backup power source, such as a generator or wind turbine; If this much equipment is out of your budget, an off-grid solar system might not be feasible for you.
