

The dopant emission of Cu doped InP/ZnS QDs from 572 to 696 nm can be realized via increasing Cu dopant concentration from 0.25% to 10%, while the peak position of dopant emission in Mn doped InP ...

Doping ZnS with co-metals has been found to be particularly effective in improving photocatalytic activity. It significantly reduces the band gap energy from 3.65 to 2.33 eV, resulting in a red shift in the adsorption edge of ZnS.

A stable and narrowly distributed dispersion of Mn-doped ZnS nanoparticles with an average diameter of 3 nm, has been synthesized via chemical precipitation without using any surfactant.

Remarkable efforts have been dedicated to developing energy storage devices with hybrid design and nano-scale approaches. This study used a hydrothermal technique to synthesize pure and Mn-doped ZnS/ZnO hybrid nanocomposites. The chemical composition and crystallinity of ZnS/ZnO nanoparticles were confirmed by XRD analysis. The morphology of the ...

The wet chemical method was used to prepare ZnS:Cu (3%) nanoparticles. The capping agent (mercaptoethanol) was handled during the synthesis process. To investigate the photovoltaic properties of ZnS:Cu (3%) nanoparticles synthesized via the wet chemical method, the incident photon to electron conversion efficiency (IPCE) measurement was performed. The ...

Zinc sulphide (ZnS) and Cu-doped ZnS nanoparticles were synthesized by the wet chemical method. The nanoparticles were characterized by UV-Visible, Fluorescence, Fourier Transform Infra-red ...

Furthermore, an enhancement in power conversion efficiency of hybrid solar cells comprising of P3HT, PCBM and Mn-doped ZnS combined in the ratio of (1:0.5:0.5) has been reported previously [46] but no work has been done on the band gap tuning of ZnS with noble metals and fabrication of inverted solar cells using Au and Ag doped ZnS QDs.

Undoped and manganese (Mn)-doped zinc selenide (ZnSe) thin films with different Mn doping contents (2, 4, 6, 8, and 10 at. wt%) were prepared in an acidic medium and deposited on glass substrates at 80 °C for 1 h using the chemical bath deposition (CBD) method. The effect of Mn doping concentration on the structural, morphological, optical and photoluminescence ...

The as-synthesized Mn:ZnS NPs (CMn = 6 mol%) were then transferred to the ITO substrate to investigate their PEC characteristics. The Mn:ZnS photoanode demonstrated excellent PEC performance, with a maximum photocurrent density of 8.03 mA cm⁻² and an energy conversion efficiency of 0.63% at 0.4 V (RHE).

In addition, our study suggests that Co:Sb₂S₃ thin films are promising materials that can be used in photovoltaic applications. ... Mn-doped ZnS QDs are synthesized by laser ablation in water and ...

However, the intensity of the ZnSe:Mn²⁺/ZnS-PLMA film at around 596 nm was similar to that of the AM 1.5G spectrum from the solar simulator, and this indicates that most of the light emitted from the ZnSe:Mn²⁺/ZnS QDs was guided to the edge of the film.

Fig. 7 shows the typical spectra of synthesized ZnS:Mn nanoparticles. The spectra show characteristic peaks to 501, 640, 1019, 1058, 1286, 1406, 1460, 1618, 2011, 2848, 2951, 3450 cm⁻¹ and some other associated peaks. The bands around 501 and 640 cm⁻¹ are assigned to the Mn O band. A strong intensity band at 1019 cm⁻¹ may be due to S O C ...

The XRD patterns of pure PVA powders, ZnS:Mn²⁺ QDs, and PVA-ZnS:Mn²⁺ QDs are shown in Fig.1. As can be seen in Fig. 1(a), the three major diffraction peaks are located at $2\theta = 28.7^\circ, 47.7^\circ, \dots$

many new applications of ZnS nanostructures are springing up, ... preparation of Mn-doped ZnS sea urchin-like architectures in a ... enhanced field emission, and photovoltaic properties,

Mn²⁺ doped ZnS nanoparticles (ZnS:Mn²⁺ NPs) are non-toxic systems known for their attractive light emitting properties. This paper discusses the luminescence properties of ZnS:Mn²⁺ NPs prepared by wet chemical synthesis with the objective of using them as down-shifters. A modification of the incident solar spectrum inducing improved exploitation of the UV ...

Photoluminescence spectra of thin films of P3HT:PCBM with un-doped ZnS, Au-doped ZnS, Ag-doped ZnS QDs in dichlorobenzene and annealed at 120°C for 15 min. U. Jabeen, et al. Chinese Journal of ...

In this study, heavy-metal-free orange light-emitting ZnSe:Mn²⁺/ZnS doped-core/shell (d-C/S) quantum dots (QDs) were synthesized using a nucleation doping strategy. To synthesize high quality d ...

Such the stability of the Mn-doped ZnS NPs-based PEC cell suggests its potential for a hydrogen production application. Our study provides insight into the development of the ...

So, it is concluded that Mn-doped ZnS nanocrystals show better cell performance than un-doped sample due to good facilitation of charges in the photovoltaic devices. Fig. 12. AFM topographic images for (a) pure polymer (b) blend of polymer with un-doped and (c) blend of polymer with doped ZnS sample after annealing at 120°C for 10 min.

The uniqueness is, synthesis of Mn:ZnS as a non-dispersive material. It is first reported where nondispersive Mn:ZnS has photovoltaic applications [8] (see Fig. 1). ... Synthesis, characterization and photovoltaic performance of Mn-doped ZnS quantum dots- P 3 HT hybrid bulk heterojunction solar cells. Optical

Materials, Volume 73, 2017, pp. 754 ...

Synthesis, characterization and photovoltaic applications of noble metal--doped ZnS quantum dots. Author links open overlay panel Uzma Jabeen a b c, Tham Adhikari b, Syed Mujtaba Shah a, ... Synthesis, characterization and photovoltaic performance of Mn-doped ZnS quantum dots- P 3 HT hybrid bulk heterojunction solar cells. Optical Materials ...

Figure 1 shows the XRD patterns of the undoped and Cu doped ZnS thin films. All the observed diffraction peaks can be indexed according to the wurtzite structure of ZnS (JCPDS card No. 8000007), with a preferential orientation along (002) in all the samples except for the (5 at%) film that has (100) as a preferential orientation. The results also indicated the presence of ...

The model of the incorporation of the Mn²⁺ ions within the crystal lattice ZnS is due to the same charge and similar sizes of Mn²⁺ ions and the Zn²⁺ ions, which improves the properties of doped QDs (Bhargava and Gallagher, 1994). The use of manganese ion as doping ions for various II-VI semiconductors can be explained by the easy insertion ...

Doped ZnS QDs are limitedly used on the photovoltaic applications while un-doped and doped II-VI semiconductor QDs have been widely used as sensitizers in quantum dot sensitized solar cells (QDSSCs) applications. ... Synthesis and photoluminescence of water soluble Mn²⁺ doped ZnS quantum dots. Appl. Surf. Sci. 254, 6432-6435 (2008) Article ...

Zinc sulfide (ZnS) is one of the leading semiconductors for optoelectronic device applications. Here, we focused on synthesizing the undoped and transition metal (Cu)-doped ZnS (Zn_{1-x}Cu_xS) nanoparticles at different copper concentrations (x = 0, 0.03, 0.05, 0.07) using solid-state reaction. The synthesized Zn_{1-x}Cu_xS ...

Er³⁺ and Sm³⁺ co-doped ZnS QDs showed a very long lifetime (up to milliseconds) compared to undoped ZnS. This exciting property has potential applications in photocatalysis, biosensing, and ...

The structural, morphological and optical properties of pure and Ag doped ZnS nano-crystallites have been investigated (12), they reported that the increase in the band gap of 1.86 eV can be ...

Synthesis of Mn²⁺-doped CuInS-ZnS QDs. The Mn²⁺-doped CuInS-ZnS QDs were synthesized by a hot-injection method with following three typical steps (as shown in Figure 1). Firstly, CIS cores were ...

The Mn-doped ZnS nanosheet (ZnS:Mn NS) structure with more electroactive sites exhibited a high specific capacity of 762 C g⁻¹ at a current density of 1 A g⁻¹, as well as excellent cycling stability (93.1% capacitance retention after 10,000 cycles). Mn-doped ZnS nanoflakes (ZnS:Mn NF) and Mn-doped ZnS nanoneedles (ZnS:Mn NN) delivered a ...

where x is equal to twice the ratio of $Mn/(Na + In)$, V is the unit cell volume and n is the number of In^{3+} or Na^{+} sites in one unit cell. Use $n = 1$, $V = 1162.93 \times 10^{-23}$ for Mn^{2+} -doped $Cs_2NaInCl_6$ perovskites [], and the calculated values of d are shown in Table 1. As shown, the d decreases with the increase in the Mn^{2+} concentration. Figure 1d shows their digital ...

To meet the demands of a growing global population and economy, the world's power generation capacity will need to increase to 30 TW (1 TW = 10^{12} W) by 2050 []. Since solar photovoltaic (PV) systems produce such minimal carbon dioxide (CO_2) emissions, they could one day meet the vast majority of the world's energy needs []. The majority of contemporary ...

Application of $Mn:ZnS$, as a n-type semiconductor against organic semiconductor P3HT in a hybrid solar cell has been discussed. The uniqueness is, synthesis of $Mn:ZnS$ as a ...

Comparing with the CdS films, the annealed ZnS film have a higher optical transmittance and consequently more photons of the longer wavelength range can pass through the film which attributes better performance of ZnS as effective buffer layer in photovoltaic applications which is in accordance with the results obtained by Hernandez Castilo et ...
