&quot;Transforming the chapel roof for small gains and the satisfaction of making a gesture ends up doing more harm than good,&quot; he wrote. ... UK's iconic King's College Chapel gets controversial solar makeover (2023, ...

Work is under way to install 438 solar panels on the roof of Cambridge's iconic King's College Chapel. It is hoped the panels will reduce the building's carbon emissions by ...

The 438 new photovoltaic panels on the roof of the King's College Chapel, Cambridge, marks a historic milestone for British architectural heritage ... Arrays of photovoltaic panels have been fixed to both of the north and south slopes of the chapel roof and will generate an anticipated 123,000 kWh/y which will feed into the college's on ...

The panels will not affect any of the historic fabric of the extraordinary Chapel, and the 100-year design life of the lead roof allows future generations the means to install replacement panels without additional intervention.

A flat roof is the ideal place for a solar photovoltaic installation to generate site-sourced electricity. Renewable energy generation has a big role to play in the delivery of a net zero carbon building and integrating renewables allows it to meet a proportion of its own energy needs, minimise carbon emissions, and reduce building running costs.

the nearly 500 photovoltaic panels, despite objections from local ... chapel's lead roof had exceeded its natural lifespan and was no longer watertight. Restoration work began last year, but permission for the 438 solar panels ... UK's iconic King's College Chapel gets controversial solar makeover Subject:

Shane Alexander, college project manager, said installation of the solar panels was designed to dovetail with work to replace the Grade 1 listed chapel's lead roof. The 15th century chapel's roof had &quot;exceeded its natural lifespan&quot; and was no longer watertight.

The chapel roof area was the single largest potential opportunity for renewable electricity generation on the main College site, but the interface of traditional craftsmanship and materials, with today's PV technology required a specialist holistic approach to ensure its long-term success.

The College has completed work on a year-long conservation of its Chapel roof and has begun installation of 438 new solar panels. Restoration of the Chapel roof had become increasingly urgent once its lead roof covering exceeded its natural lifespan, meaning it was no longer watertight.

Its 438 photovoltaic panels, along with solar panels on the roofs of two nearby buildings, will supply a shade over five percent of the college's electricity. King's College Chapel is one...
