Photovoltaic solar energy is based on the photoelectric effect, in which some materials are able to absorb luminous particles and release electrons. The capture of solar radiation takes place by photovoltaic panels that are made up of smaller structures, called photovoltaic cells.

Photovoltaic cells (made of semiconductor material) absorb photons, elementary particles present in sunlight. The absorbed photons excite the electrons present in the photovoltaic cell and the movement of these electrons generates an electric current. In solar thermal conversion, solar energy is stored in the form of thermal energy.
