Abstract- Qatar declared that by 2020 solar energy would produce at least 2% of its total generated electric power (EP). The known solar power plants EP at utility scale level are concentrating solar power (using parabolic trough collectors, linear Fresnel collector, and solar tower), photovoltaic (PV), and integrated solar combined cycle using fossil fuel (natural gas) ...

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.

DOD is the ratio of the quantity of charge (usually in ampere-hours) removed from a battery to its rated capacity and can be expressed as a percentage. Designing a solar PV system requires a systematic approach. The first step in sizing a stand-alone solar PV system is to perform an energy audit, looking for places to save energy.
