Power free conveyor systems

Power and free conveyor system are the workhorse of the overhead conveyor product family. They are typically used to transport parts along an assembly line from one process to another. Power and free conveyors also enable products ...

Compared with other overhead conveying technologies, Power and free conveyor systems usually have fewer motors and fewer moving parts, which can make mistakes. The electrical system of power and free conveyor belts is usually much simpler than friction conveyor belts or electrified monorail systems. A simple pneumatic device (cylinder) can be ...

The most basic overhead conveyor system is the hand push trolley system (with a trolley on an I-beam or enclosed track). When a motor and chain is added to the system, these conveyors can move continuously or stop/start (indexing mode) with the parts moving along with the chain.

A Power and Free Roller Conveyor is an advanced material handling system that integrates the efficiency of powered conveyor belts with the flexibility of free roller conveyors. This hybrid system is designed to provide optimal control over the movement and positioning of goods across manufacturing, assembly, and distribution centers.

Many people have heard about Power and Free Conveyors, but often don't know exactly how they work. Ultimotion shows you how this simple but elegant mechanical system enables trolleys to stop and start as well as accumulate (buffer) at ...

Inverted Power and Free Conveyors are ideally suited to demanding industrial environments that require a high degree of flexibility and accuracy. Inverted Power and Free Conveyor Systems provide the unique ability to stop individual loads without stopping the entire production line, and accumulate loads for a specific period of time before inducting the loads back into the system.

An Inverted Power and Free Conveyor utilizes a single enclosed track combining the power chain and the free trolleys. The power & free system uses fixed chain dogs that engage the pivotal free trolleys to move them through the system. Disengaging the free trolley from the chain dog allows for free trolley accumulation. Areas of use include ...

The Rapid Flow 3X3 is our medium duty Power & Free conveyor system that combines the ruggedness of X348 chain with the versatility of the enclosed track chain. This combination offers the best of both systems, operating properly with much higher chain pulls than enclosed track systems. This means fewer drives in long systems, giving you far lower installation and control ...
