Your Power Mac G5 features the latest computer technology, including advanced 64-bit dual core processor technology, high-speed DDR2 memory, PCI Express graphics and ...

See the second photo, it's a small silver square with a circular black button inset into its top and PMU Reset in tiny white lettering beside it. The photo shows it near to the battery holder but on my model the button is further away on the far corner of the circuit board. Look around for it. Insert the new battery then press the reset ONE ...

My Power Mac G5 is the last model made just before the Intel upgrade. I made no software or hardware changes recently that preceded this issue. I pressed the SMU button to no effect. ... OK, the backup battery may be contributing to the problems; there is a lot of mischief attributed to a weak or EOL backup battery.

I've been having problems booting my a Dual 2 GHz Power Mac G5 (rev A) running 10.4.11. I press the power button (either on the computer itself or on my cinema display). I hear the normal rev-ing startup noise, feel/hear the fans blowing at a normal rate, and then nothing. ... It might be worth checking your backup battery. It's located just in ...

The Tadiran battery in the picture was just removed from a Power Mac 7200/120 that has been out of service for a while (probably was the second one into the machine, given the 1999 build year), and the Saft was pulled from my G5 a ...

Tiger introduced over 200 new features, including Spotlight for instant desktop search and Dashboard for accessing vital information at a glance. ... Backup Battery: 3.6 V 850 mAh Lithium (922-4028) Maximum ...

The backup battery does not power the magnetometer. It seems to me that the only time the backup battery would be used is in the event of a loss of the ship's electrical power due to a failure of an alternator, master switch, battery, master relay or otherwise. In that case, the HSI would be useless irrespective of a working G5 backup battery.

To change the backup battery in a flat panel Mac G4, you will need to locate the battery compartment on the back of the computer. It is usually located near the power cord connection. Once you locate the battery compartment, loosen the screws on the compartment cover and gently remove it. Take out the old battery and replace it with a new battery.

My Power Mac G5 won't boot up, get the chimes and get as far as the Grey Screen with Apple Logo and then no further. Have run the Apple Hardware Test and it comes up with zero problems, everything passes ok. Have changed the 3.6V battery today. Have tried booting up off the original disc's but that does not seem to work?

Now to install our shiny brand new 1TB hard drive, and back up that data. After the battery's installed, of course. Show more Less. Reply. Link. User profile ...

That can be handled by disconnecting AC power, removing the battery for a few minutes, putting the battery back in, pressing the PMU/SMU button once and then waiting a minute or two before reconnecting AC power. You should check the PRAM backup battery by disconnecting AC power, measuring the battery voltage while the battery is in its holder ...

Same problem with my Power Mac G5 2GHz Dual: It would power up, but wouldn't boot up, no boot chime, no image on the monitor, no power to keyboard/mouse, and after a minute the fans went crazy. Nothing I tried helped: Complete disassembly & cleaning (filthy with dust), check/reseat RAM modules, check/reseat graphics card, replace PRAM battery ...

The only way I have ever fixed the issue you mentioned in the first post (push power button, power button lights up, click heard (in my case), fans spin for a second, then power button dims when you let it go) is to replace the power supply. It's not terribly hard -- it takes an hour or so. It's the most common PowerPC Mac problem I've come across.

If that doesn't work, then something that might work is the so-called rest and relaxation business of disconnecting the AC power, removing the battery and letting the machine do a cold soak over night, then put the battery back in, hook up the power and give it a try. One other thought: is the G5 on a UPS backup?

This battery is an exact replacement for the below listed models... Power Mac G5 - all models with PCI slots. NOT for the PCI-Express based Power Macintosh G5 2.0, 2.3 or dual 2.5. NewerTech 3.6V Lithium 1/2 AA PRAM Battery for Mac give you high-performance, quality, and longevity to your battery upgrade.
