

# Rebuilding ryobi 18v lithium batteries

P190 Ryobi 18V Lithium Battery Rebuild Service is backordered and will ship as soon as it is back in stock. Charging Recommendations. 1. Always ensure that the battery is not hot and is at room temperature before charging. 2. Once charged, remove the battery from the charger. Do not store the battery on the charger for extended periods of time.

Before deciding to rebuild a Ryobi battery, consider the following: A Ryobi battery, being a power tool battery, can produce up to 18 volts. This high voltage capacity can make it dangerous if not handled properly, as it may leak poisonous fluids or even explode.

Turn off the Ryobi power tool once it stops running, and allow the battery to cool for about 10 to 15 minutes. Turn the Ryobi power tool back on and let it run until it stops again, before resting another 10 minutes. Repeat this process until the battery is too weak to turn the tool on at all.

P192 Ryobi 18V Lithium Battery Rebuild Service is backordered and will ship as soon as it is back in stock. Charging Recommendations. 1. Always ensure that the battery is not hot and is at room temperature before charging. 2. Once charged, remove the battery from the charger. Do not store the battery on the charger for extended periods of time.
