CREBS are clean renewable energy bonds. There's a couple of variants on these, the original CREBS and the new CREBS which were one of many different municipal bonds that folks have used for these types of projects over the years that have since then discontinued in recent years. And the question I guess is whether or not we think that CREBs ...

The clean energy sector is the primary transmitter of shocks to green bonds in the event of return transmission

from renewable energy equities. So, the amount of shock sent from green bonds to renewable energy stocks is less than the amount transmitted from renewable energy stocks to green bonds.
