

# Renewable energy consumption by state

Changes to the State Energy Data System (SEDS) Notice: In October 2023, we updated the way we calculate primary energy consumption of electricity generation from noncombustible renewable energy sources (solar, wind, hydroelectric, and geothermal). Visit our [Changes to 1960--2022 conversion factor for renewable energy](#) page to learn more.

In 2020, renewable energy sources (including wind, hydroelectric, solar, biomass, and geothermal energy) generated a record 834 billion kilowatthours (kWh) of electricity, or about 21% of all the electricity generated in the United States. Only natural gas (1,617 billion kWh) produced more electricity than renewables in the United States in 2020. . Renewables ...

In the United States, most renewable electricity generation comes from hydropower, solar, and wind. Generation from renewable energy sources has grown rapidly as renewable capacity, mostly solar and wind, has been added to the grid. In 2021, a record amount of new utility-scale solar capacity was installed in the United States.

Electricity and natural gas consumption and expenditures; Vehicle miles traveled, fuel consumption, and registration by fuel type ... Office of Energy Efficiency and Renewable Energy offices are planned in 2020 and beyond to work toward a platform delivering comprehensive, integrated clean energy data that supports state and local decision ...

The State Energy Portal is home to EIA's State Energy Profiles and EIA's State Energy Data System. The portal also features state rankings for 10 key energy statistics, has a search function to help users find EIA's state data easily, and allows users to compare state energy data along a variety of data points and energy indicators.

The Australian Energy Statistics is the authoritative and official source of energy statistics for Australia to support decision making and help understand how our energy supply and use is changing. It is updated each year and consists of detailed historical energy consumption, production and trade statistics and balances.

Arizona is known for its stunning landscapes and natural wonders from the Grand Canyon in the north to the Saguaro deserts in the south. 1 The state has few fossil fuel reserves, but it does have abundant renewable energy resources. 2,3,4,5 Although higher elevations receive greater amounts of precipitation, including significant snowfalls, most of Arizona is ...

Renewable Energy Consumption: Michigan: U.S. Rank: Period: find more: Renewable Energy Consumption as a Share of State Total ... wind energy supplied 64% of the state's renewable electricity and about 7% of Michigan's total net generation from all sources. 108 The state's strongest onshore winds are along its curving Lake Huron and Lake ...

# Renewable energy consumption by state

the United States through 2050, but renewable energy is the fastest growing ... GDP and energy consumption continue post-pandemic recovery 8 0 20 40 60 80 100 2010 2020 2030 2040 2050 2021 history projections High Economic Growth Reference Low Economic Growth Delivered energy across end-use sectors

Advancing Renewable Energy. Renewable Portfolio Standard (RPS) and Clean Energy Standard (CES) policies are projected to support an additional 300 TWh of clean electricity supply by 2030. 24 See " U.S. Energy System Factsheet " ...

Renewable energy statistics 2024 provides datasets on power-generation capacity for 2014-2023, actual power generation for 2014-2022 and renewable energy balances for over 150 countries and areas for 2021-2022. ... The investment data is presented in millions of United States dollars (USD million) at 2021 prices. ...

EERE's applied research, development, and demonstration activities aim to make renewable energy cost-competitive with traditional sources of energy. Learn more about EERE's work in geothermal, solar, wind, and water power. ... Advancing ...

Colorado, a Rocky Mountain state, has abundant fossil fuel reserves and renewable energy resources. 1 Its diverse geography and geology include the headwaters of major rivers; significant wind and solar energy resources; and substantial deposits of crude oil, natural gas, and coal. 2,3,4,5 Colorado ranks among the top 10 states in total energy ...

Changes to the State Energy Data System (SEDS) Notice: In October 2023, we updated the way we calculate primary energy consumption of electricity generation from noncombustible renewable energy sources (solar, wind, hydroelectric, and geothermal). Visit our Changes to 1960--2022 conversion factor for renewable energy page to learn more.

The state has renewable energy resources, ... and its energy consumption and energy production each rank near the midpoint of the states. 10,11,12 The industrial sector consumes the most energy and accounts for 32% of South Carolina's total energy use. 13 Manufacturing activities are a major contributor to South Carolina's GDP and include: ...

United States: How is energy consumption changing from year-to-year? Click to open interactive version. Related chart: Absolute annual change in primary energy consumption. ... Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and ...

State and Local Energy Profile include summary data and charts for the following: Greenhouse gas emissions; Electricity and natural gas consumption and expenditures; Vehicle miles traveled, fuel consumption, and registration by ...

Query tool for detailed country and regional energy data (monthly, annual) Annual projections to 2050 Annual Energy Outlook (released: March 16, 2023) -- See complete table listing for reference case and side cases .

Elsewhere, consumption rose in most states, driven by higher transport activity. ... (42%) is renewable energy, principally hydro power, and renewables also constitute 18% of South Australian energy use. Australian energy mix, by state and territory, 2022-23. [Skip left navigation](#). [Main menu](#). Australian Energy Statistics.

EERE's applied research, development, and demonstration activities aim to make renewable energy cost-competitive with traditional sources of energy. [Learn more about EERE's work in geothermal, solar, wind, and water power.](#) ... [Advancing Renewable Energy in the United States.](#) ... it's important to reduce your energy consumption and improve your ...

Massachusetts consumes about 17 times more energy than it produces, but it is among the five states with the lowest per capita energy consumption. 7,8 Massachusetts summers are generally mild and mid-winter temperatures, which are often below freezing, rarely fall below zero. Precipitation, as rain or snow, is equally distributed throughout the year. 9 ...

California stretches two-thirds of the way up the U.S. West Coast. At its greatest distances, it is more than 1,000 miles long and 500 miles wide. 11 With such great distances to travel, transportation accounts for the largest share of the state's energy consumption. 12 Californians have more registered motor vehicles and travel more vehicle miles than residents ...

Renewable resources supply about 7% of Florida's total in-state electricity net generation, and about three-fourths of that renewable generation comes from solar energy. 43 In 2022, Florida was third in the nation, after California and Texas, in total solar power generating capacity, and solar energy accounted for more than 5% of Florida's total net generation. 44,45 ...

Compared with 2018, coal consumption in the United States decreased nearly 15%, and total renewable energy consumption grew by 1%. Historically, wood was the main source of U.S. energy until the mid-1800s and was the only commercial-scale renewable source of energy in the United States until the first hydropower plants began producing ...

As the world's only crowd-sourced report on renewable energy, the Renewables 2022 Global Status Report (GSR) is in a class of its own. The Renewables 2022 Global Status Report documents the progress made in the renewable energy sector. It highlights the opportunities afforded by a renewable-based economy and society, including the ability to achieve more ...

Advancing Renewable Energy. Renewable Portfolio Standard (RPS) and Clean Energy Standard (CES) policies are projected to support an additional 300 TWh of clean electricity supply by 2030. 24 See " U.S. Energy System Factsheet " for a map of these policies. In addition to federal tax credits (See " U.S. Energy System Factsheet "), state governments also provide policies and ...

In the first quarter of 2022, Texas led all states in overall renewable energy production, accounting for over

## Renewable energy consumption by state

14% of the country's totals, due in large part to the state's prolific wind ...

This is a list of U.S. states by total electricity generation, percent of generation that is renewable, total renewable generation, percent of total domestic renewable generation, and carbon intensity in 2022. The largest renewable electricity source was wind, which has exceeded hydro since 2019.
