

# Renewable energy long island

Small (backyard) wind turbines use wind energy to produce clean, emissions-free power for a home, farm, or small business. With this simple technology, individuals can generate their own power and cut electric bills while helping to protect the environment.

Farmingdale, NY - Today the Long Island Power Authority and PSEG-Long Island released a long awaited draft plan for current and future energy needs for Long Island. New York has a target to source 50 percent of energy from renewables, including a target to add 2,400 megawatts of offshore wind power to New York's grid, by 2030.

The Riverhead Solar Farm is a 6.3 MWac fixed-tilt solar photovoltaic facility under construction in Calverton, NY. The project will generate clean, safe solar energy with zero emissions and will displace approximately 8,322 metric tons of carbon dioxide equivalent emissions each year.

Renewable Energy Long Island (reLI), established in 2003, is a membership-based, 501-c-3 not-for-profit organization promoting clean, sustainable energy use and generation on Long Island. reLI is committed to accelerate the transition to a 100% renewable energy economy.

Geothermal Heat and A/C. A small-scale geothermal heat pump system--often installed to serve a single household--consists of a network of heat-transferring pipes buried four to six feet underground and connecting to an electric-powered pump ...

Position Description & Candidate Qualifications. Renewable Energy Long Island ("reLI"), founded in 2003, is a 501-c-3 not-for-profit organization working to accelerate the transition to 100 percent renewable energy on Long Island and beyond. reLI is the only not-for-profit organization on Long Island with an exclusive focus on renewable ...

We do this by 1) serving as a resource to help communities join the global 100% renewable energy movement, and 2) providing consumer-friendly information on commercial and residential clean energy technologies such as solar, wind and energy efficiency.
