Solar energy in the United States has exploded over the past decade. In 2010, 667 megawatt (MW) was installed in homes. By 2020, this had increased by 27 times to over 18,061 MW.[1] At the same time, the cost of a residential solar system has come down to half of what it was, even before incentives are applied, and continues to drop.

Rooftop solar installation

A solar rooftop means solar panel installation in home or business rooftop and generally, solar panel installation measures in kilowatt (kW). If the consumers are paying electricity bills of ~Rs. 2,000 to 3,000 per month and ~Rs. 30,000 to 50,000 on yearly basis the ideal requirement of the house is 2kW or 3kW.

A solar rooftop system works on the concept of conversion of sunlight into electricity. The phenomenon is known as the photovoltaic effect. When sunlight falls on the PV cells in a solar panel, the sunlight is converted into electricity. The generated power is DC current. An AC combiner box is used to convert that DC power into usable AC power.

Layout and Stanchion Placement: On the roof, use measurements and calculations to determine the optimal locations for the stanchions that will support the solar panels. Mark the positions for each stanchion according to the layout plan.

Selecting the right contractor is one of the most important decisions you make during the rooftop solar installation process. Best practice is to get more than one quote from experienced contractors, all with the same project specifications.
