Ich selbst nutze das Seplos E10 BMS nur zur Absicherung, da es wie alle BMS keine Absorption kennt. Im BMS habe ich eine max Zell Spannung von 3,525 Volt und eine max Pack spannung von 56,4 Volt eingestellt. Bis zur Obergrenze von 58,4 Volt ist also noch genug Luft nach oben, falls es zu einem zu starken Zellspannungs Unterschied kommt.

The Seplos Mason-48280L DIY Kit with BMS 3.0 with 2A active balancer. I like the standing design as this will fit into the space i have for the battery. I also like the PC Software UI and the BMS firmware is also updatable. My only con is the charging algorithm/software implementation which Andy from OffGrid garage has commented upon.

This Seplos Mason 280 diy kit is suitable with 280Ah, and 304Ah Lifepo4 battery cells in 16S1P configuration, Featuring Seplos BMS 3.0, delivering enhanced performance and comprehensive protection for the entire battery pack.
