*The Nissan lithium-ion battery and battery capacity limited warranty includes coverage for defects in materials or workmanship for 96 months/100,000 miles (whichever occurs first) as well as protection against capacity loss below 9 segments of capacity (out of 12) as shown on the vehicle's capacity gauge for a period of 96 months/100,000 miles (whichever occurs first).

It powers on but has red service ev system no power warning - Answered by a verified Nissan Mechanic. ... Hello Arthur, I'm sorry to hear that your 2018 Nissan Leaf has a power issue and a service EV system warning. This could indicate a problem with the battery, the charging unit, the electric motor, or the electrical energy management ...

My Leaf displayed Warning Service EV System, Warning Service EV System Unable to restart after power off. tonight. Battery is 100% charged according to the dash display but the Battery symbol at the top right side of the dash is illuminated as are the warning lights for front and rear hazards. The vehicle is a 2021 Leaf S Plus.

If your Nissan Leaf has completely lost power and is stuck in an unsafe location, it's crucial to call for a tow. Unique among electric vehicles, the Leaf typically can't be towed in neutral. Since putting it in neutral is not always possible, ensure that you inform the tow company that your vehicle is an EV.

The Nissan Leaf was one of the first EV's on the market and, coincidentally enough, the first EV vehicle to be hit with a major class action in Klee v. Nissan North America There have been numerous complaints of the dreaded "Service EV System - No Power" warning appearing on the driver dash console. Some argue that the easy fix is ...

I had the same problem with my 2018 S. Delivery was late November, and I'll have to find the manufacture date. Just crossed 7500 miles. Car wouldn't engage and had to be towed to dealership.

Hi All, Anyone familiar with the above problem? Battery is charged but everytime I turn it on O get the message. Also at 1 point my navigation screens keeps turning on and off. I will call the dealer tomorrow to find out what's happening. What a ...

Symptom: Cannot start the vehicle, with error "Service EV System No Power" on the screen. Now, if you pay closer attention to the beep (say pressing the lock/unlock on the key fob), you can hear it has very weak beeping sound. I couldn't even open the charging port remotely.

My wife's 2018 leaf with 12200 miles come up with Service EV system message a week ago, whilst wife driving. She drove home without any issue approximately 11 miles. had to turn vehicle of as unable to secure. As others unable to select drive or reverse when you turned back. Also unable to charge.

A place to discuss the Nissan LEAF electric vehicle Members Online ... Service EV system, No power UPDATE . So wanted to give you all a wee update on my 2022 Leaf e+ as it's been a couple of weeks since my original post about it breaking down for the 2nd time with the same fault after it was supposed to be fixed. So took car into dealer about ...

That morning I drove about 60 miles in 60 degree weather, headlights on but no wipers. At the destination I turned the car off as usual. About 10 minutes later I tried to start the car and got the "Service EV System No power" message. I kept trying and failing to start, getting the same message. After about 10 minutes it started.

A combination of the Leaf not being designed well to give an exact diagnostic code of the failure and technicians not being familiar with the Leaf usually results in them swapping far more parts than is actually needed. Enjoy the fact that it's under warranty--they're going to have to pay for all the perfectly good parts they swap out.

I have experienced a similar issue "service EV system, power reduced stop safely", "no power, stop safely", "service EV system, no power" for 4 times in the past 3 months. The car basically wouldn't start. 1st time: local Nissan Torrance dealer cleared the code and it drove again 2nd time: replaced the 12V battery and it drove again

30kWh batteries were easily the worst ones and the 2nd gens seem to be better for degradation. Also, from the bit of info I've seen on 2nd gens losing a bar, it looks like they only drop the 1st bar at around 81-82% now.

1. Make sure the new 12V battery is fully charged and not defective (have it load tested to confirm it is OK and then charge it fully). 2. Clear diagnostic trouble codes (DTC"s) ...
