An on-grid solar system is an electrical generator using solar energy, a non-conventional source of energy. In contrast with off-grid systems, grid-tied systems are connected to the grid. As a consequence, the not used generated power of the system can be sold to the electrical company. In addition, the user can buy energy from the grid if needed.

A solar farm, also referred to as a photovoltaic (PV) power station, solar power plant or solar park, is essentially a large-scale solar energy generation system designed to supply renewable electricity to the power grid.

The technology involved in this process is about collecting the photovoltaic cells, which then generate electricity through the photovoltaic effect, which is utilized for your home, industrial and commercial purpose. The Solar Power System is a collection of solar cells where the maximum amount of light hits the cell the more electricity generated

Solar-powered farm irrigation systems are cost-effective and sustainable, harnessing the sun's energy to power water pumps. The core components of a solar irrigation system include solar panels, charge controllers, batteries, and solar pumps. Submersible pumps are ideal for deeper water sources, while surface pumps are suited for shallow water.
